DESIGN STATEMENT

"Throughout my undergraduate career I have pushed myself to the limits on each project with design technology and integration. I believe that by implementing and integrating design technology, into my design process, that it can open up tools that can effectively and clearly illustrate my design intent. From my second year of undergraduate studies through to my senior year I have learned, through my studios, to not let the software guide my process, but to be in control of the software. I've learned to complement my hand sketches with design technology, but to not let the software guide the design. I learned that by bridging the design in a sketchbook to an effective communication of the design, through the tools, that I could truly illustrate and analyze my design in a manner that was understandable to my peers and professors. Throughout all of my undergraduate studios, I challenged myself to learn beyond the course objectives, and to evolve my software knowledge, to align to my design process, by integrating this technology in a productive and legible way. By aligning these processes I am able to more clearly illustrate my design intent, and to stay on top of industry technology that can be leveraged in a professional work environment. I would like to further this understanding in graduate studies at Montana State University because during my undergraduate studies I began to understand this and make it work for me, but through graduate coursework I know I can master. I would like the opportunity to leverage all of this knowledge gained in my undergraduate coursework, to further my understanding on how to effectively integrate these processes, to create my own design process that is unique to myself, and to be beneficial to the future of architecture." Brian D. Nickel

CURRICULUM VITAE

Brian Douglas Nickel

228 S. Cottonwood Road Unit #110
Bozeman, Montana 59718

EDUCATION

08/2012-12/2015 **Montana State University | School of Architecture**
B.A. in Environmental Design
Graduated with Honors
3.54 GPA

09/2008-12/2011 **Norco Community College**
A.S. in Architecture

EXPERIENCE

10/2014-Present **Harvey's Plumbing and Heating Mechanical Designer**
HVAC, Plumbing, and Fabrication system coordination. HVAC and Plumbing system design. Heat loss calculations for ACCA Manual J Standards. High-end residential construction coordination. Launched 20 ipads for office to field coordination. A360 Cloud Collaboration.
<http://harveysph.com/About/Roster>

07/2015-Present **The Revit Saver!**
A blog dedicated for posting challenging solutions and ideas for promoting the future evolution of the AEC community! Coordination and collaboration with the AEC community.
therevitsaver.blogspot.com

05/2014-10/2014 **Intern Architect - David C. Fowler Architecture**
Conceptual, Schematic, Design Development. Detail drawings under the supervision of David C. Fowler. High end residential construction drawings for homes in Atlanta, Georgia. Revit design drafting and coordination.

Alcala Architecture
Conceptual, Schematic, Design Development. Revit drafting high end residential custom homes in Southern California. Supervised under the direction of Gilbert Mark Alcala.

2006 **Stuart Architecture**
Conceptual, Schematic, Design Development. Detail drawings under the supervision of Ernest Stuart. AutoCAD training and shortcuts supervised by Kimberly Stuart. High end residential construction on the coast of Laguna Beach, California.

AWARDS + RECOGNITION

01/2015 **Rendering Pro of the Week - Autodesk 360 Rendering January Publication**
<http://autodesk360rendering.typepad.com/blog/2015/01/rendering-pro-of-the-week-brian-nickel.html>

09/2015 **AIAS Cat Card Scholarship**
\$500.00 Printing Credit

09/2015 **Autodesk User Group International Magazine Publication**
September 2015 Article Pages 30-33
<http://issuu.com/augi/docs/aw201509hr>

10/2015 **Shirlee White Memorial Scholarship**
\$1,000.00 Scholarship

11/2015 **DynamoBIM.com Process Evolution Article Recognition**
<http://dynamobim.com/> Front Page Image that references AUGI Publication

PROFESSIONAL SKILLS

CAD (Revit, AutoCAD, Rhino, Inventor, SysQue, Wrightsoft, HVAC Solutions)

Visualization (Rhino, SketchUp, 3DS Max, Lumion, ReCap, Memento)

Visual Programming (Dynamo, Grasshopper)

Adobe (InDesign, Photoshop, Illustrator, Acrobat)

Microsoft Office (Word, Excel, PowerPoint, Access, Outlook)

Google (Docs, Sheets, Forms, and Blogger)

Fabrication (CAMDuct, ESTMep, CADmep)

Geographic Information Systems (ArcMap, ArcGIS)

BIM Content Management (Unifi, A360 Collaboration, A360 Team, A360)

Presentation (Prezi)

The Montana State University Visitor's Center is intended to be a place for future students visiting the campus. The visitor's center is located on the existing soccer fields south of campus near the Strand Union Building. The building is intended to be a starting point for future students to be comfortable transitioning into the college life. The building's form is meant to be designed to give back to the earth in a way that water can be recycled and fed to the new apple orchards. The site recycles the water back to the center corridor. This water is then used to be stored in underground cisterns that can irrigate the trees. This space is intended to be tranquil and pleasant for students to study in the summer time, and for students to pass through on their way to classes. The building is intended to ease the initial overwhelming nature that a new college student may feel through its natural form, accessibility and site characteristics.

The Butte Infill project is located in Butte, Montana for Louise Nevelson. Louise was a collector of trash, who turned this into forms of art. Louise was raised in New York. The program consisted of a museum and multi family units above. I responded to this design by utilizing as much of the infill space on the main and second floor as possible. Some obstacles were lighting and arranging these types of spaces in a very narrow corridor. I created light wells on the side walls that allowed for maximum light down to the ground level. This natural light allowed for the occupiable space to be well lit even though it was nestled between two adjacent buildings. I was able to fulfill the clients needs by accomodating a space that allowed for her to display her art made of trash, leasible office space, and a residence for Louise Nevelson.

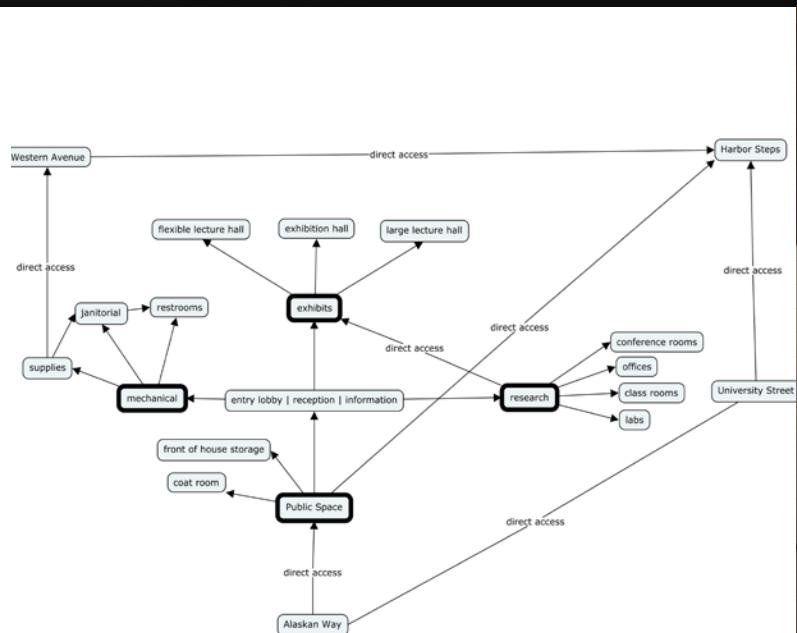

BUTTE INFILL

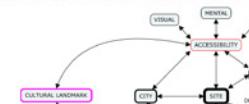

Throughout my analysis of the site, in the field, through diagrams, and precedent research, I feel compelled to follow an approach and view of the site as a connection to the waterfront, as well as the city, that is ultimately following the hydrologic process. Basically the site is a component of an overall system that does not exist without leveraging the existing. After looking at the flows of the hydrologic cycle it is simple to view that water precipitates, integrates, condenses and evaporates and by taking these approaches of the hydrologic cycle and overlaying these principles to the idea that the site is the integral part in the system one can see how the site can function systemically as the intermediate space between the city's downtown and the waterfront. With this being said the downtown core precipitates its occupants down through the site integrating them into and condensing them into the waterfront where they can experience the waterfront and then evaporate back to the city. This evaporation back to the city is still influenced to continue the hydrologic cycle because the experience throughout the whole system leads back to stimulating the occupants to precipitate back down through the site and into the waterfront. This stimulation by "experience" described is influenced by the visual, physical, and mental experiences. These experiences exist and are to each their own independently dependent on the passerby. This unique experience leads to a want for more and is what ultimately drives the whole system.

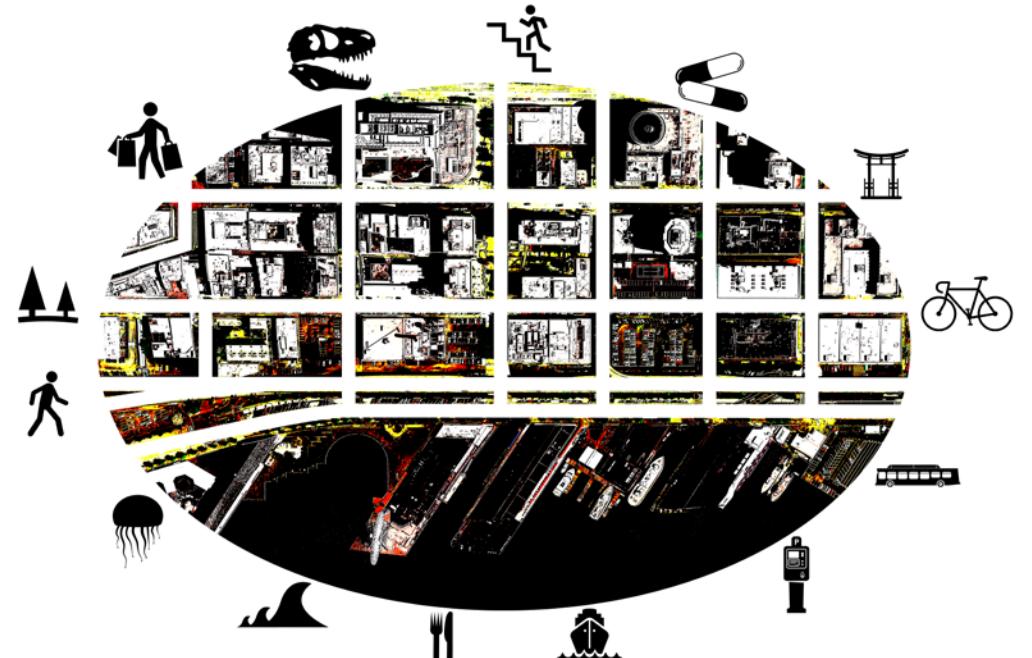

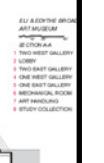

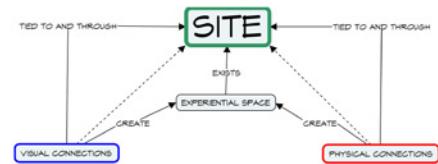

SEATTLE HYDROLOGY INSTITUTE

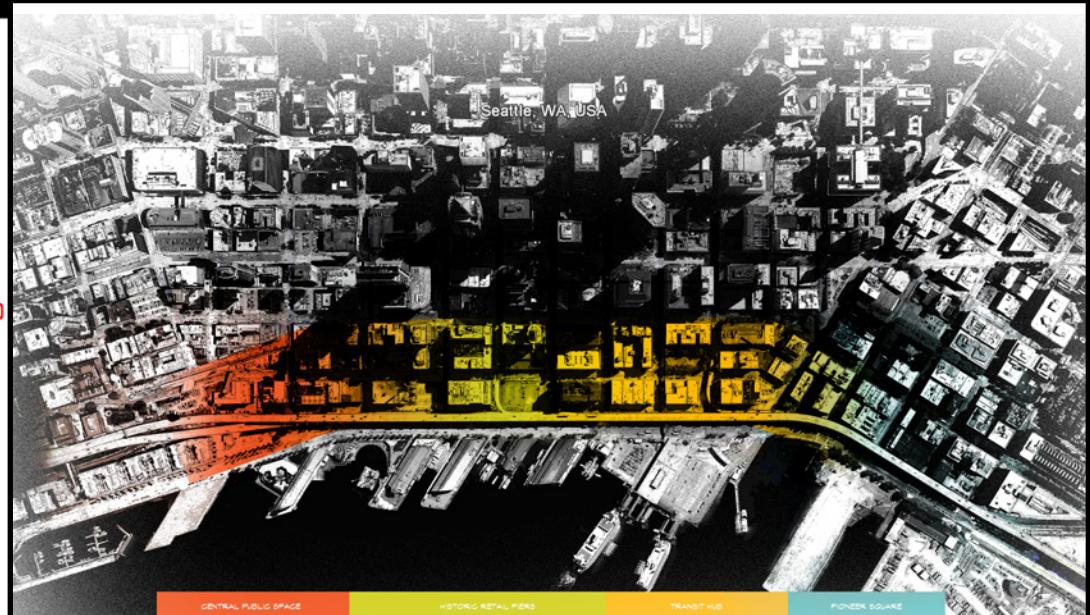

Snøhetta WON THE COMPETITION FOR THE BUSAN OPERA HOUSE IN NORTH KOREA AND THERE IS NO REASON TO NOT SEE IT. THE BOX CREATES A PLACE THAT IS NOT JUST FOR SIGHT BUT FOR ONE TO BE SEEN AND TO PLACE FOR READING. THE BOX PROJECTS THE WATER TO THE CITY AND THE CITY TO THE WATER. THE BOX CREATES A PLACE OF SPACE THAT ALLOWS FOR THE BUILDING TO BE NOT JUST PHYSICALLY ACCESSIBLE, BUT ACCESSIBLE VISUALLY AND OTHERWISE. THE PLACE IS NOT JUST A PLACE FOR MEETING, BUT THE BOX PROJECTS THE WATER TO THE CITY AND THE CITY TO THE WATER AS WELL. AN ENTRANCE ON BOTH ENDS ALLOWING EVERYONE AND NOT JUST SOMEONE. THE PLANES OF THE BUILDING EXTEND TO NOT ONLY GREET THE CITY, BUT TO GREET THE SEA AND THE WATER AS WELL. THE BUILDING RELATED TO MY DESIGN IDEAS IN THAT THE SURROUNDINGS ARE KEPT AS A DESTINATION COMPARED TO A PORT. THIS ALLOWS THE OCCUPANTS TO EXPERIENCE THE BLUR IN TO A NEW SPACE THAT IS REAL WHILE REMAINING CONNECTED TO THE EXISTING ENVIRONMENT AND ONES NOT SEEN BY ALL.

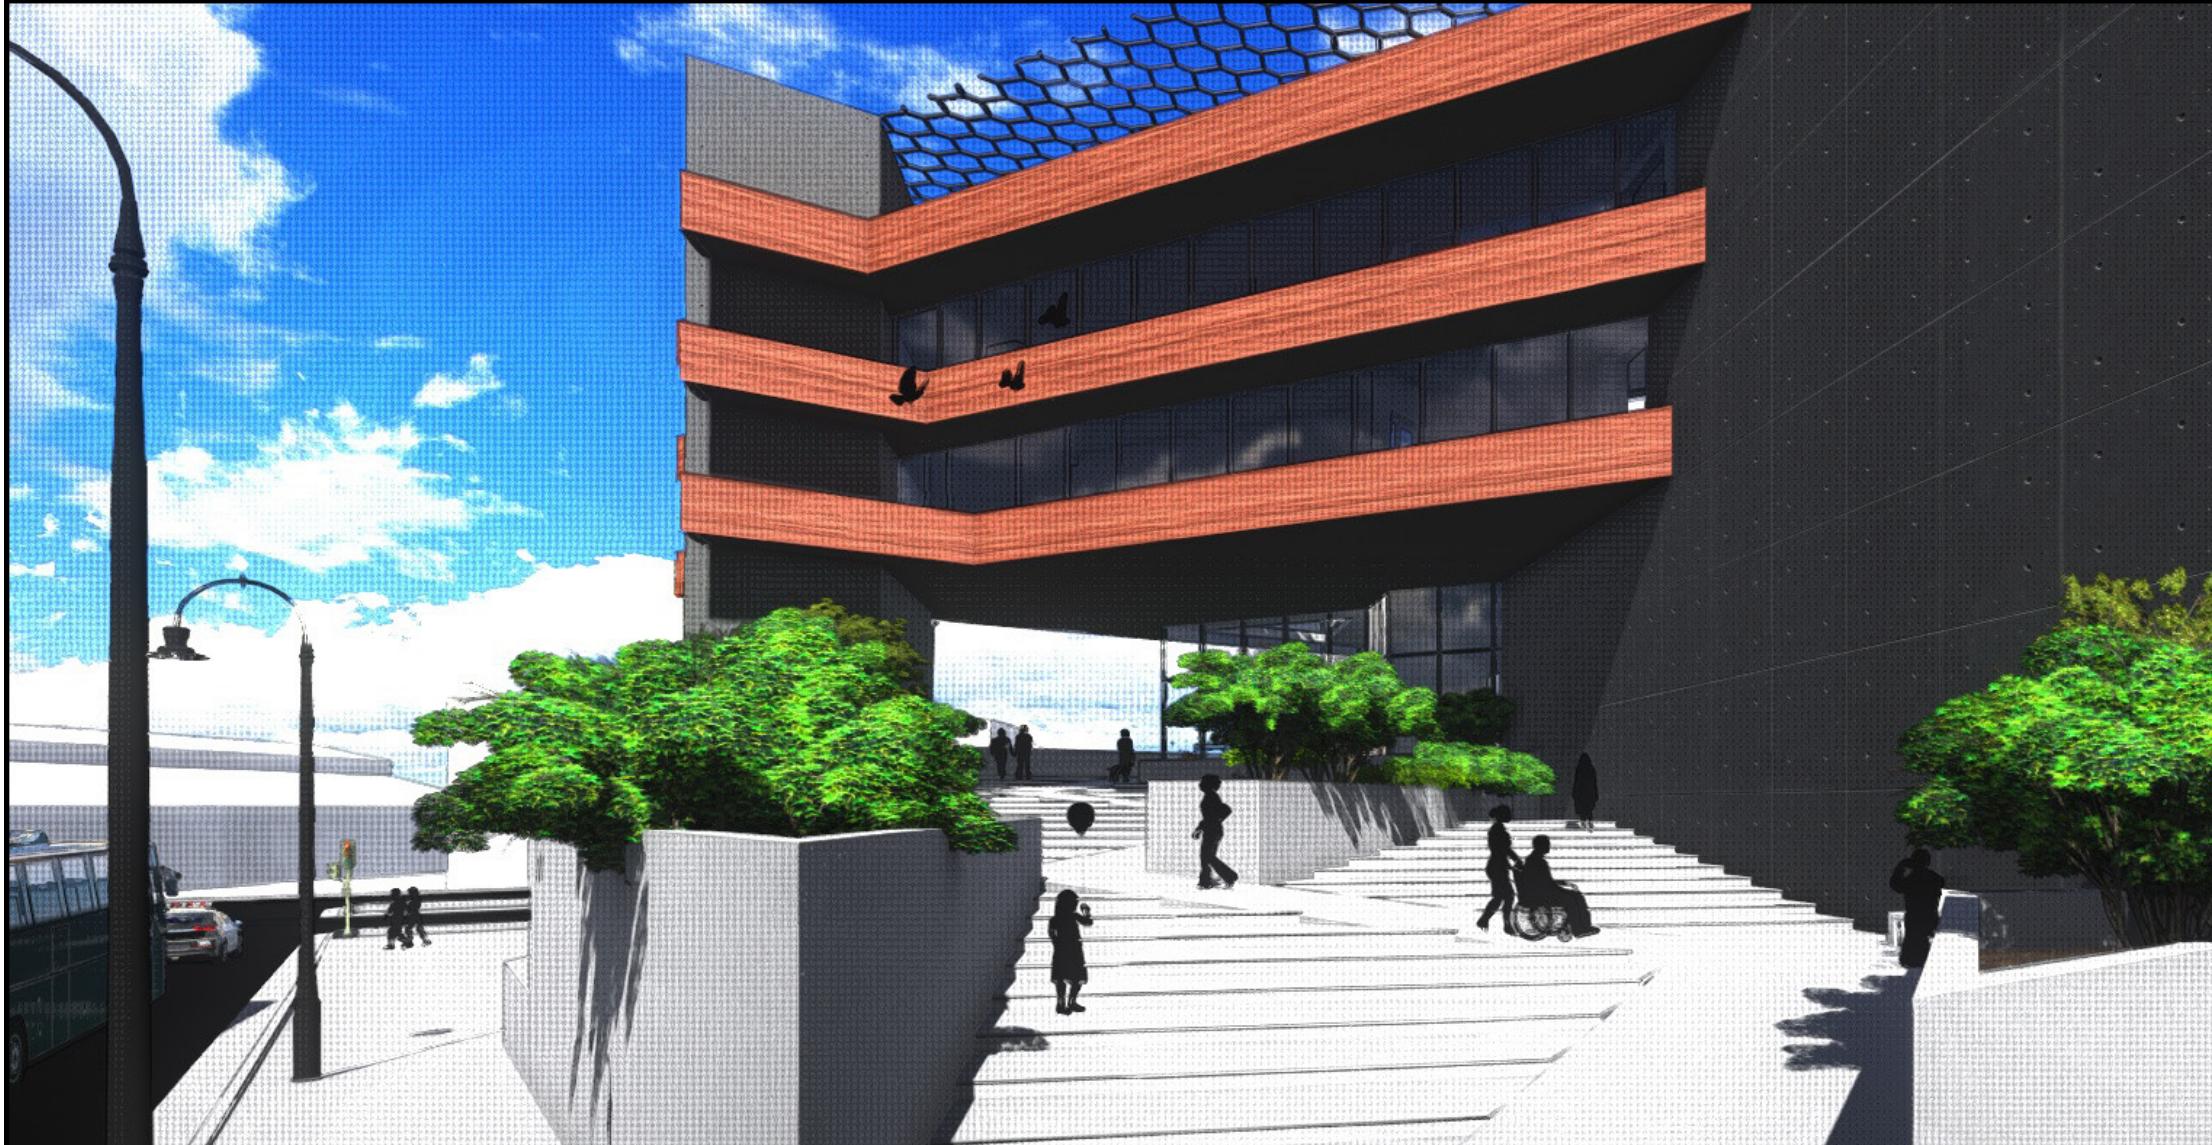

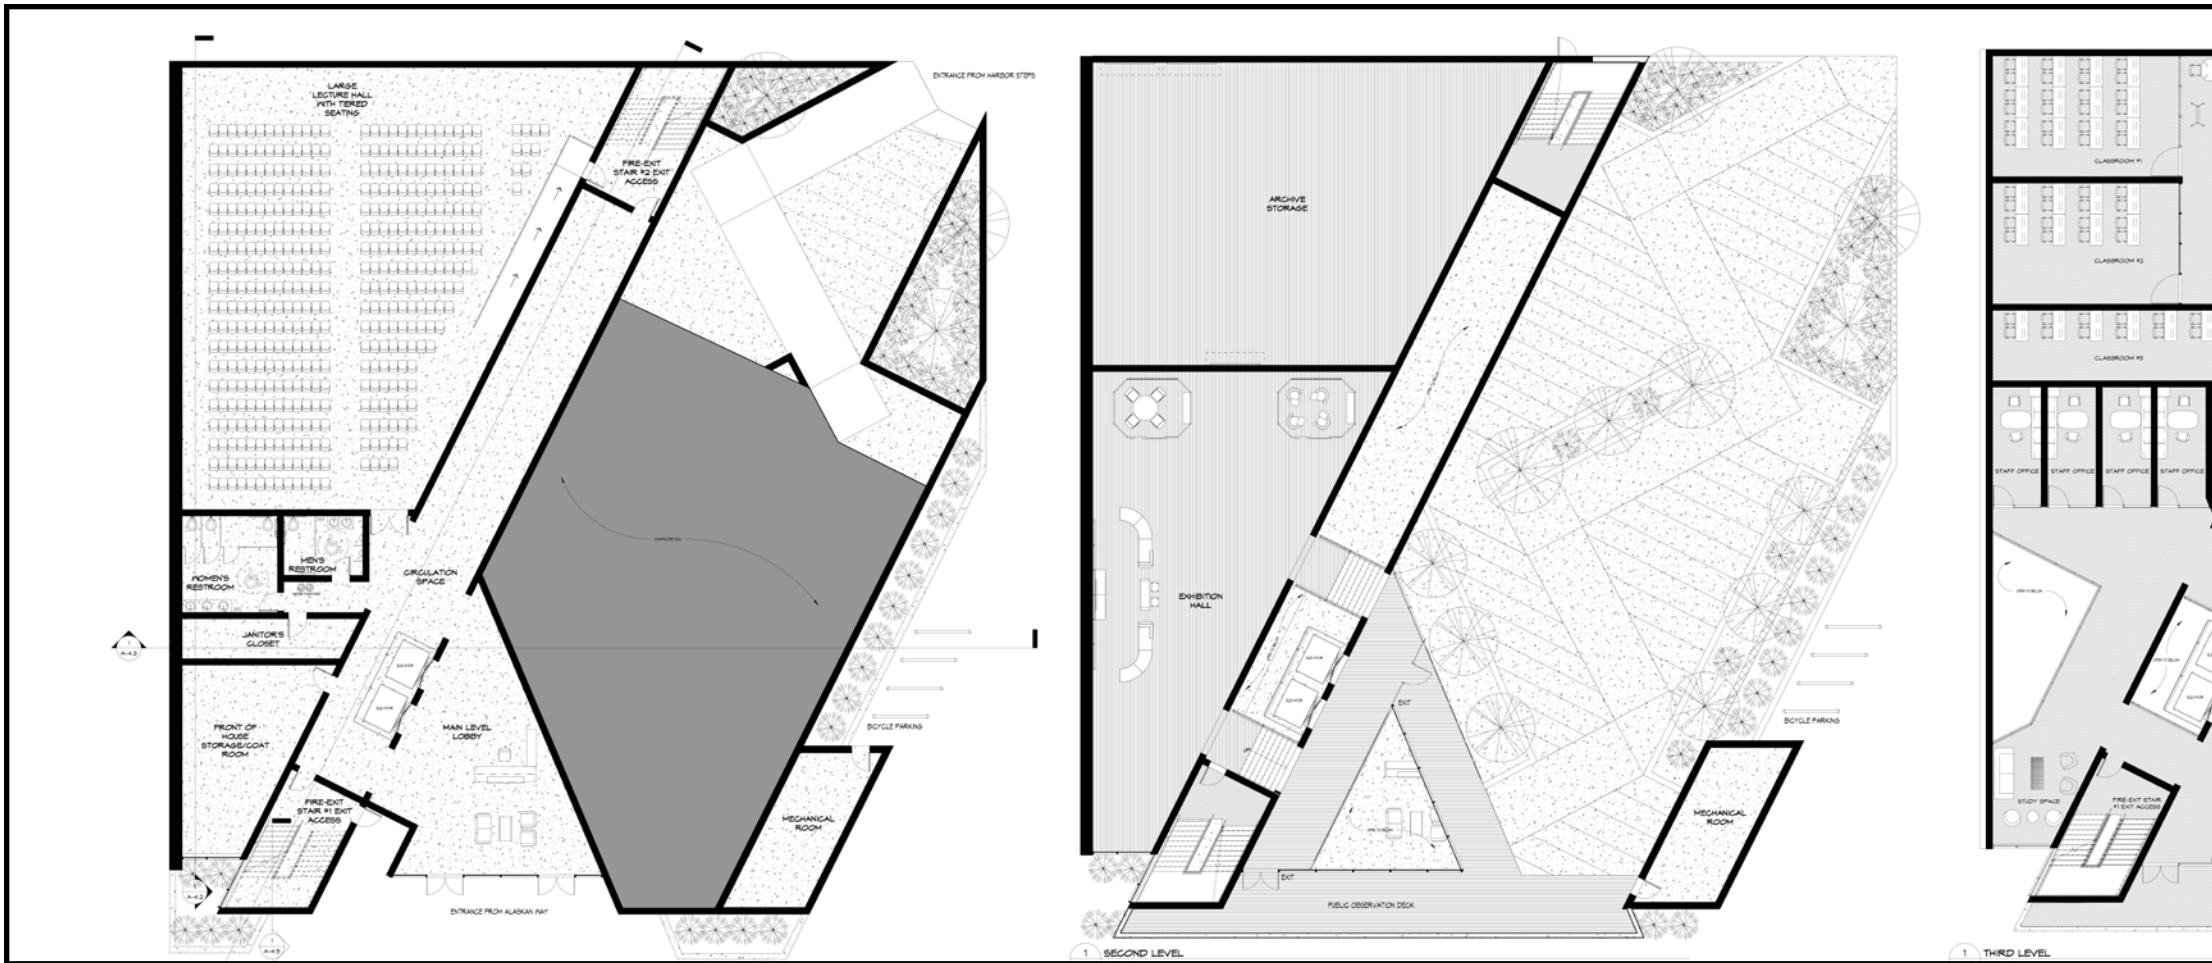

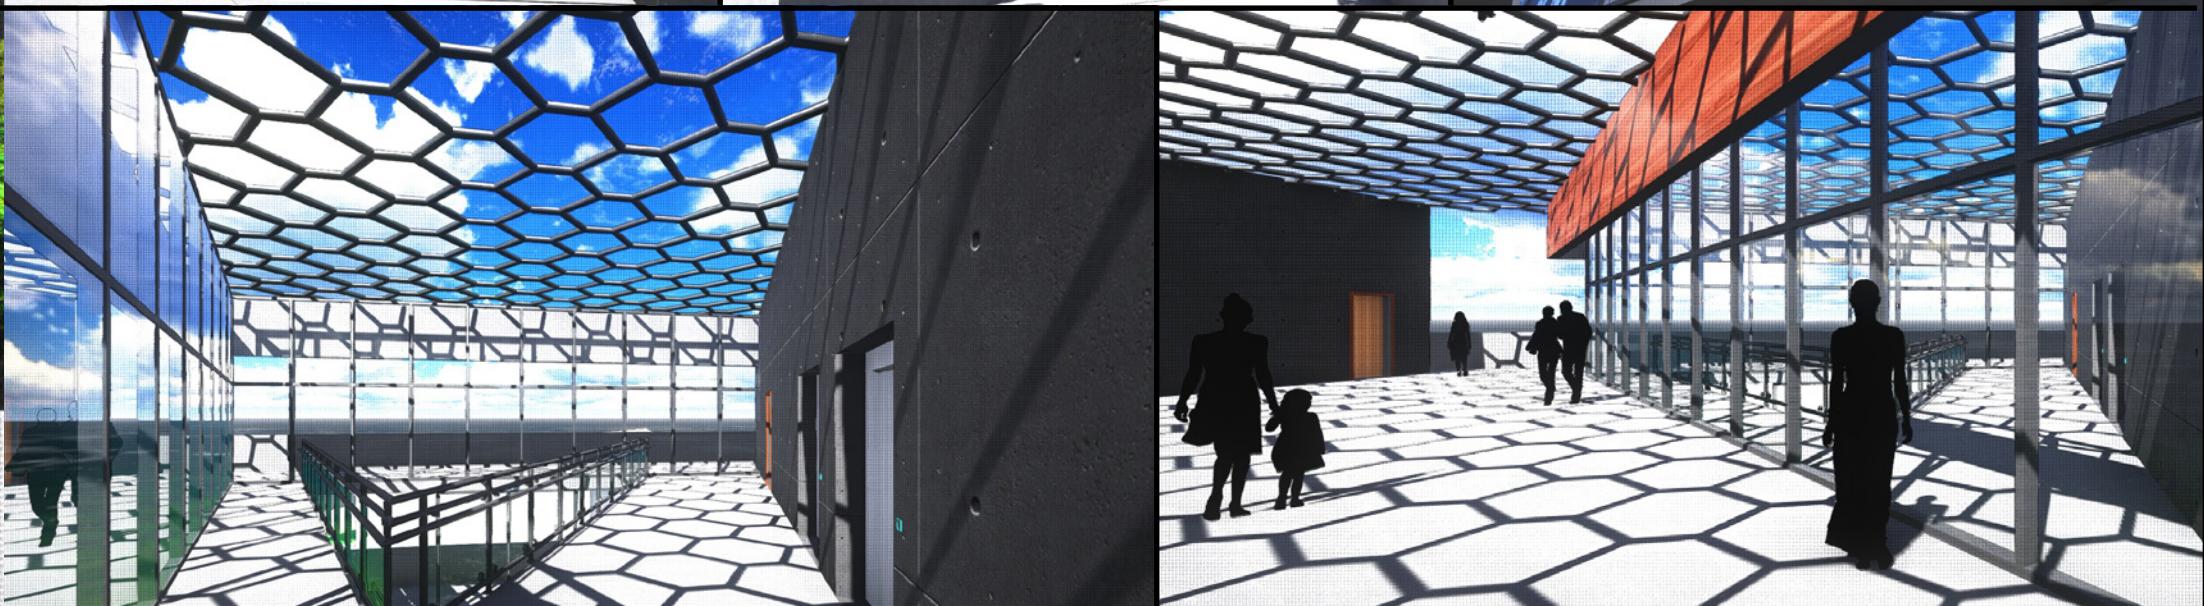

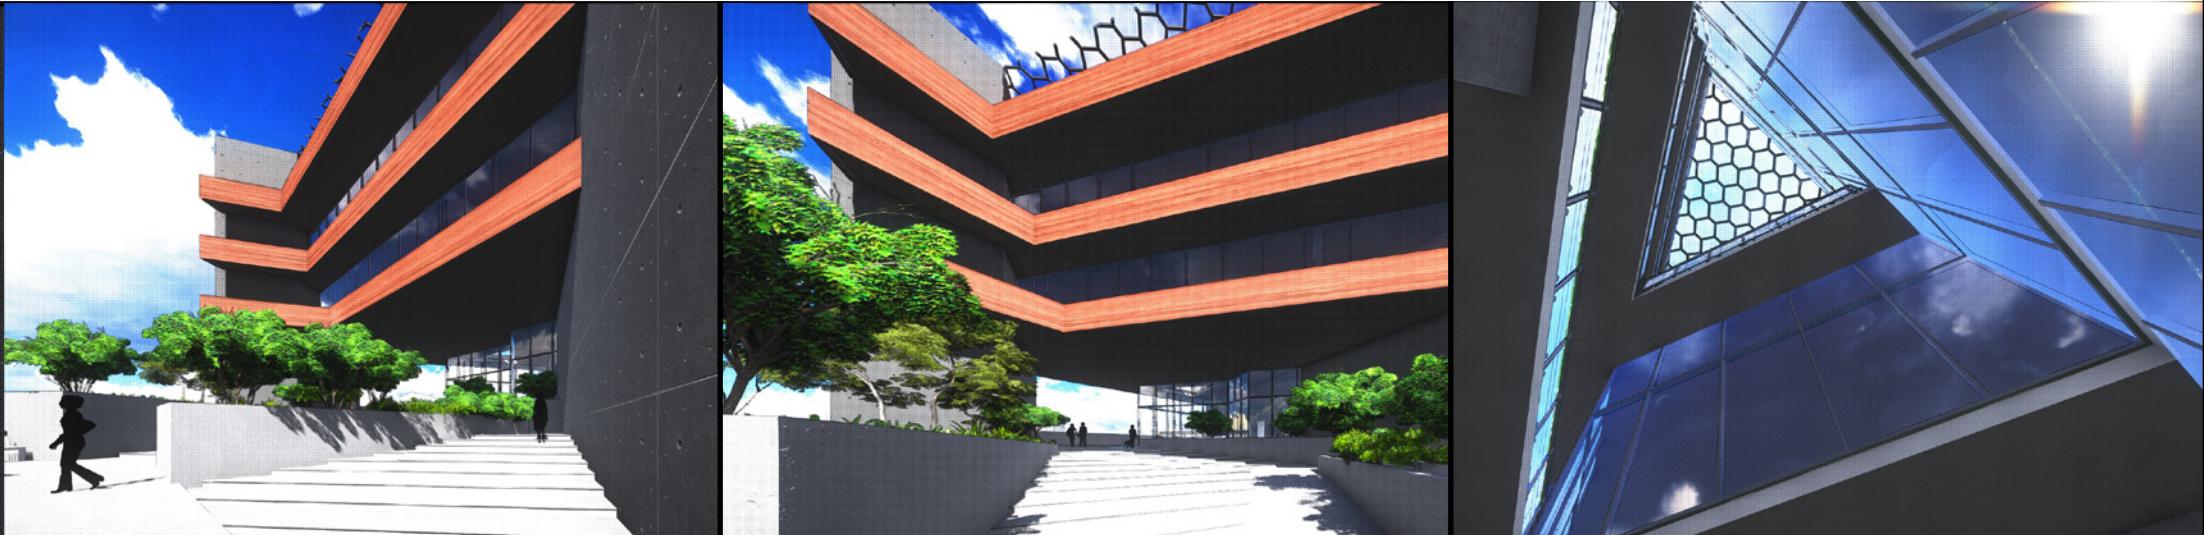

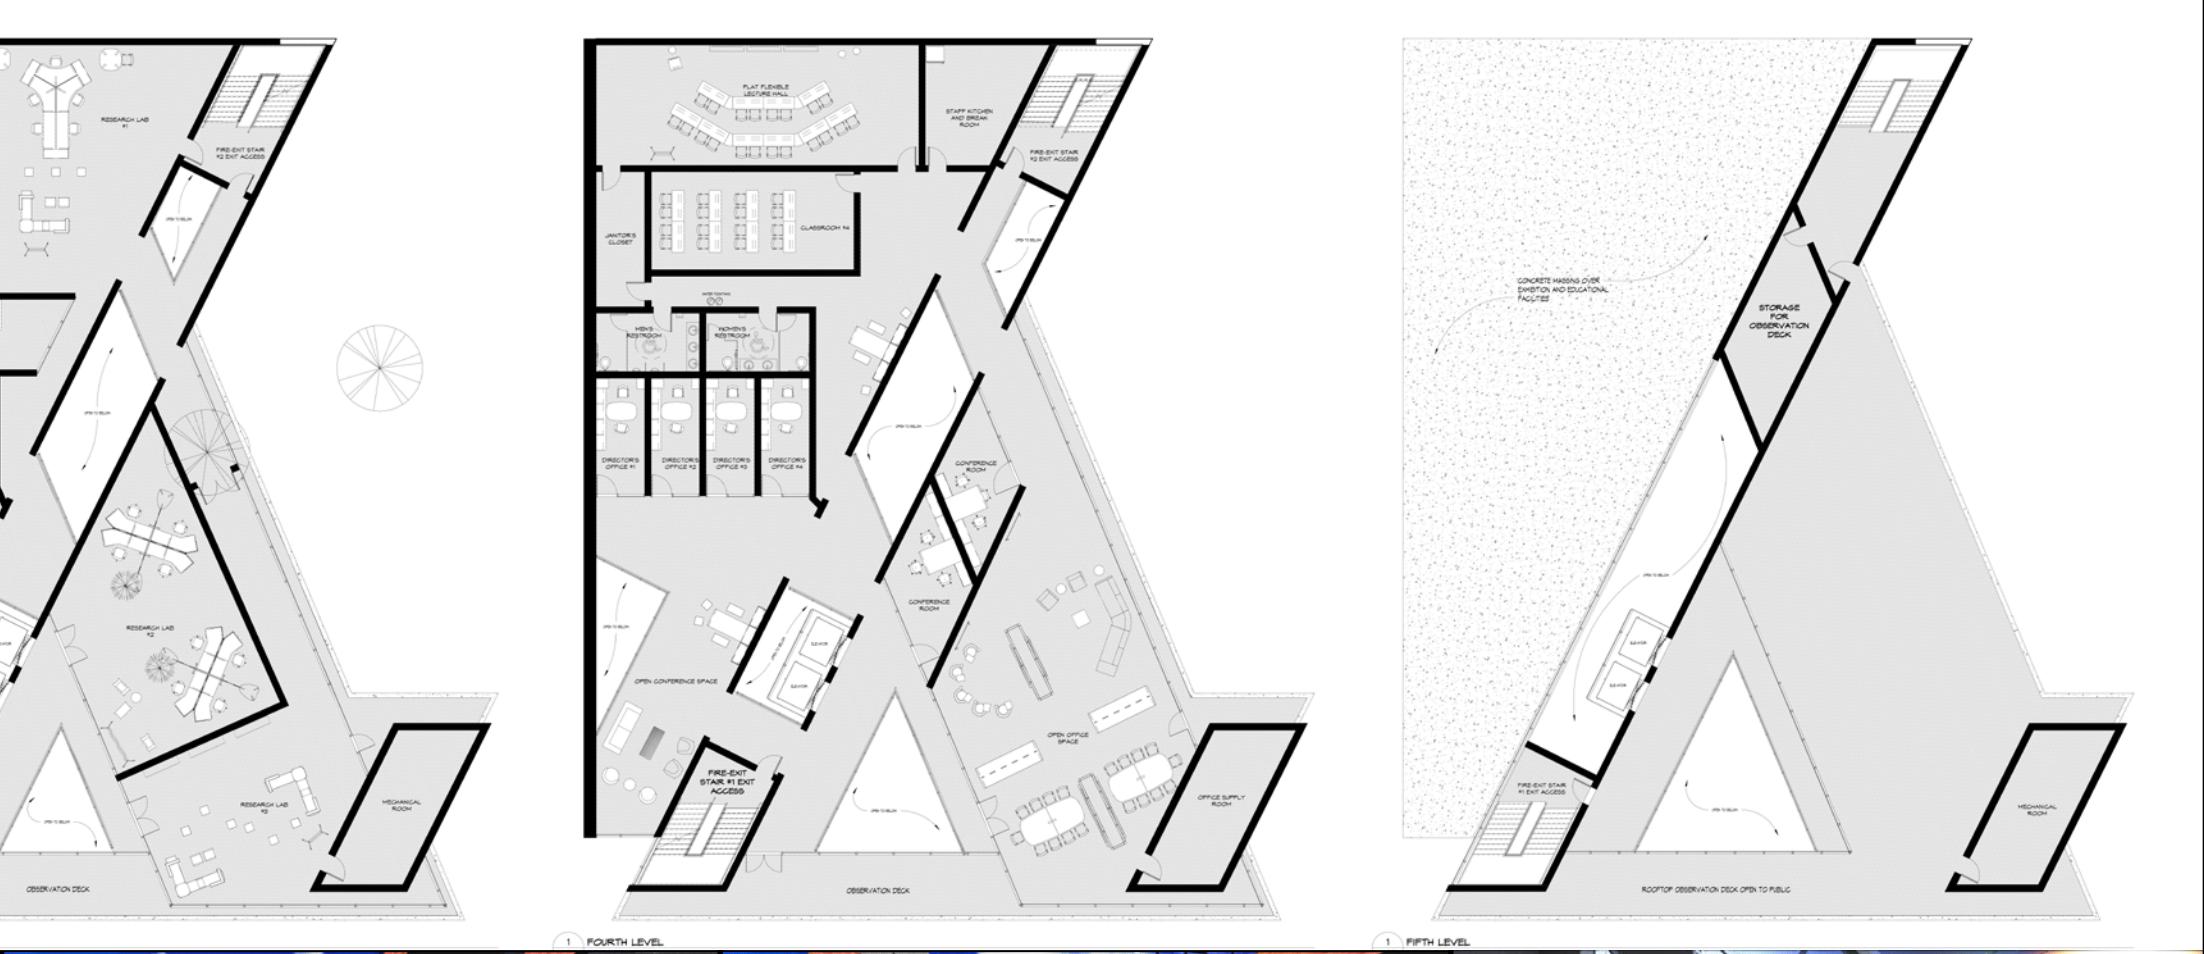

THE ELI & EDYTHE BROAD ART MUSEUM TAKES AN APPROACH AT FOCUSING ON A NETWORK OF PATHS AND VISUAL CONNECTIONS. THIS PARTICULAR FOCUS RELATES TOWARDS MY DESIGN IN THE ASPECT OF CONNECTING THE DOWNTOWN WITH THE WATERFRONT AND THE WATERFRONT BACK TO THE DOWNTOWN AREA THROUGH THE UTILIZATION OF THESE PATHS AND VISUAL CONNECTIONS, BUT IN A MANNER THAT'S ABLE TO ILLUSTRATE THE SPATIAL GRADIENT WITHIN THE DISTINCT OPPOSITES. THIS CAN ALSO INFLUENCE THE DESIGN THROUGH THE USE OF THE SPATIAL OPPOSITES ATTACHING MANUFACTURED AND NATURAL SPACES. AN DIVERGENCE IN THE INTERIOR SPACES, THE PATHS CREATE A FOCUS ON SHORTCUTS THROUGHOUT A SPACE. THE IDEA BEHIND THIS CONCEPT TAKE THE HORIZONTAL AND VERTICAL CONNECTIONS AND INTERTWINING THEM INTO A SPACE THAT IS CREATE IN THE INTERMEDIATE SPACE. THIS CREATES DIFFERENT PERSPECTIVES AND RELATIONSHIPS THROUGHOUT. THESE VISUAL CONNECTIONS AND PHYSICAL CONNECTIONS EMBED THE DESIGN INTO THE SITE AND CREATE ITS PLACE ON THE SITE.

AMAGER BAKKE BY Bjarke Ingels Group SETS THE BAR HIGH FOR BUILDING THAT EXHIBITS SYSTEMIC ENGAGEMENT THROUGH IT'S SIMPLE FORM, UNIQUE CONNECTION WITH THE URBAN FABRIC, AND PUBLIC ENGAGEMENT THROUGH THE USE OF ITS ROOF TOP SKI-SLOPE. THE BUILDING HAS A DIRECT RELATIONSHIP TO MY BIG IDEA THROUGH MY STUDIO APPROACH IN ITS DESIGN INTEGRATION AND CONNECTION TO BOTH THE URBAN FABRIC AND PEOPLE. THE PRECEDENCE HELPS GUIDE ME IN A WAY OF THINKING ABOUT THE DIVERGENCE OF NOT ONLY JUST THE SITE ITSELF, BUT HOW IT CAN INTEGRATE WITH THE EXISTING AND HOW IT CAN INTEGRATE WITH NEARBY EXISTING BUILDINGS FROM MINT TO PRESENT TO FUTURE CONDITIONS. IT'S IMPORTANT TO NOTE THAT BIG WAS ONCE A PROBLEM AND SOLVED IT SIMPLY CALMLY, YET STYLISTICALLY THROUGH NOT ONLY ACHIEVING A CONNECTION TO THE EXISTING, BUT THROUGH CREATING AN ACTION OF THE SMOKE STACK TO BLOW A SMOKE RING AMBELISHES THIS CONNECTION TO THE URBAN FABRIC THROUGH IT'S DESIGN BY ALLOWING A NEW MEANS OF ENERGY USE. I WAS ABLE TO LEARN THROUGH THIS STUDY THAT NOT ONLY THE CONNECTIONS THROUGH THE SITE MATTER, BUT THE ACTIVE CONDITIONS OF WHAT EXIST ALSO NEED TO BE THOUGHT ABOUT IN A MANNER THAT CAN CREATE ACKNOWLEDGEMENT OF PLACE FOR THE FUTURE CONDITIONS.

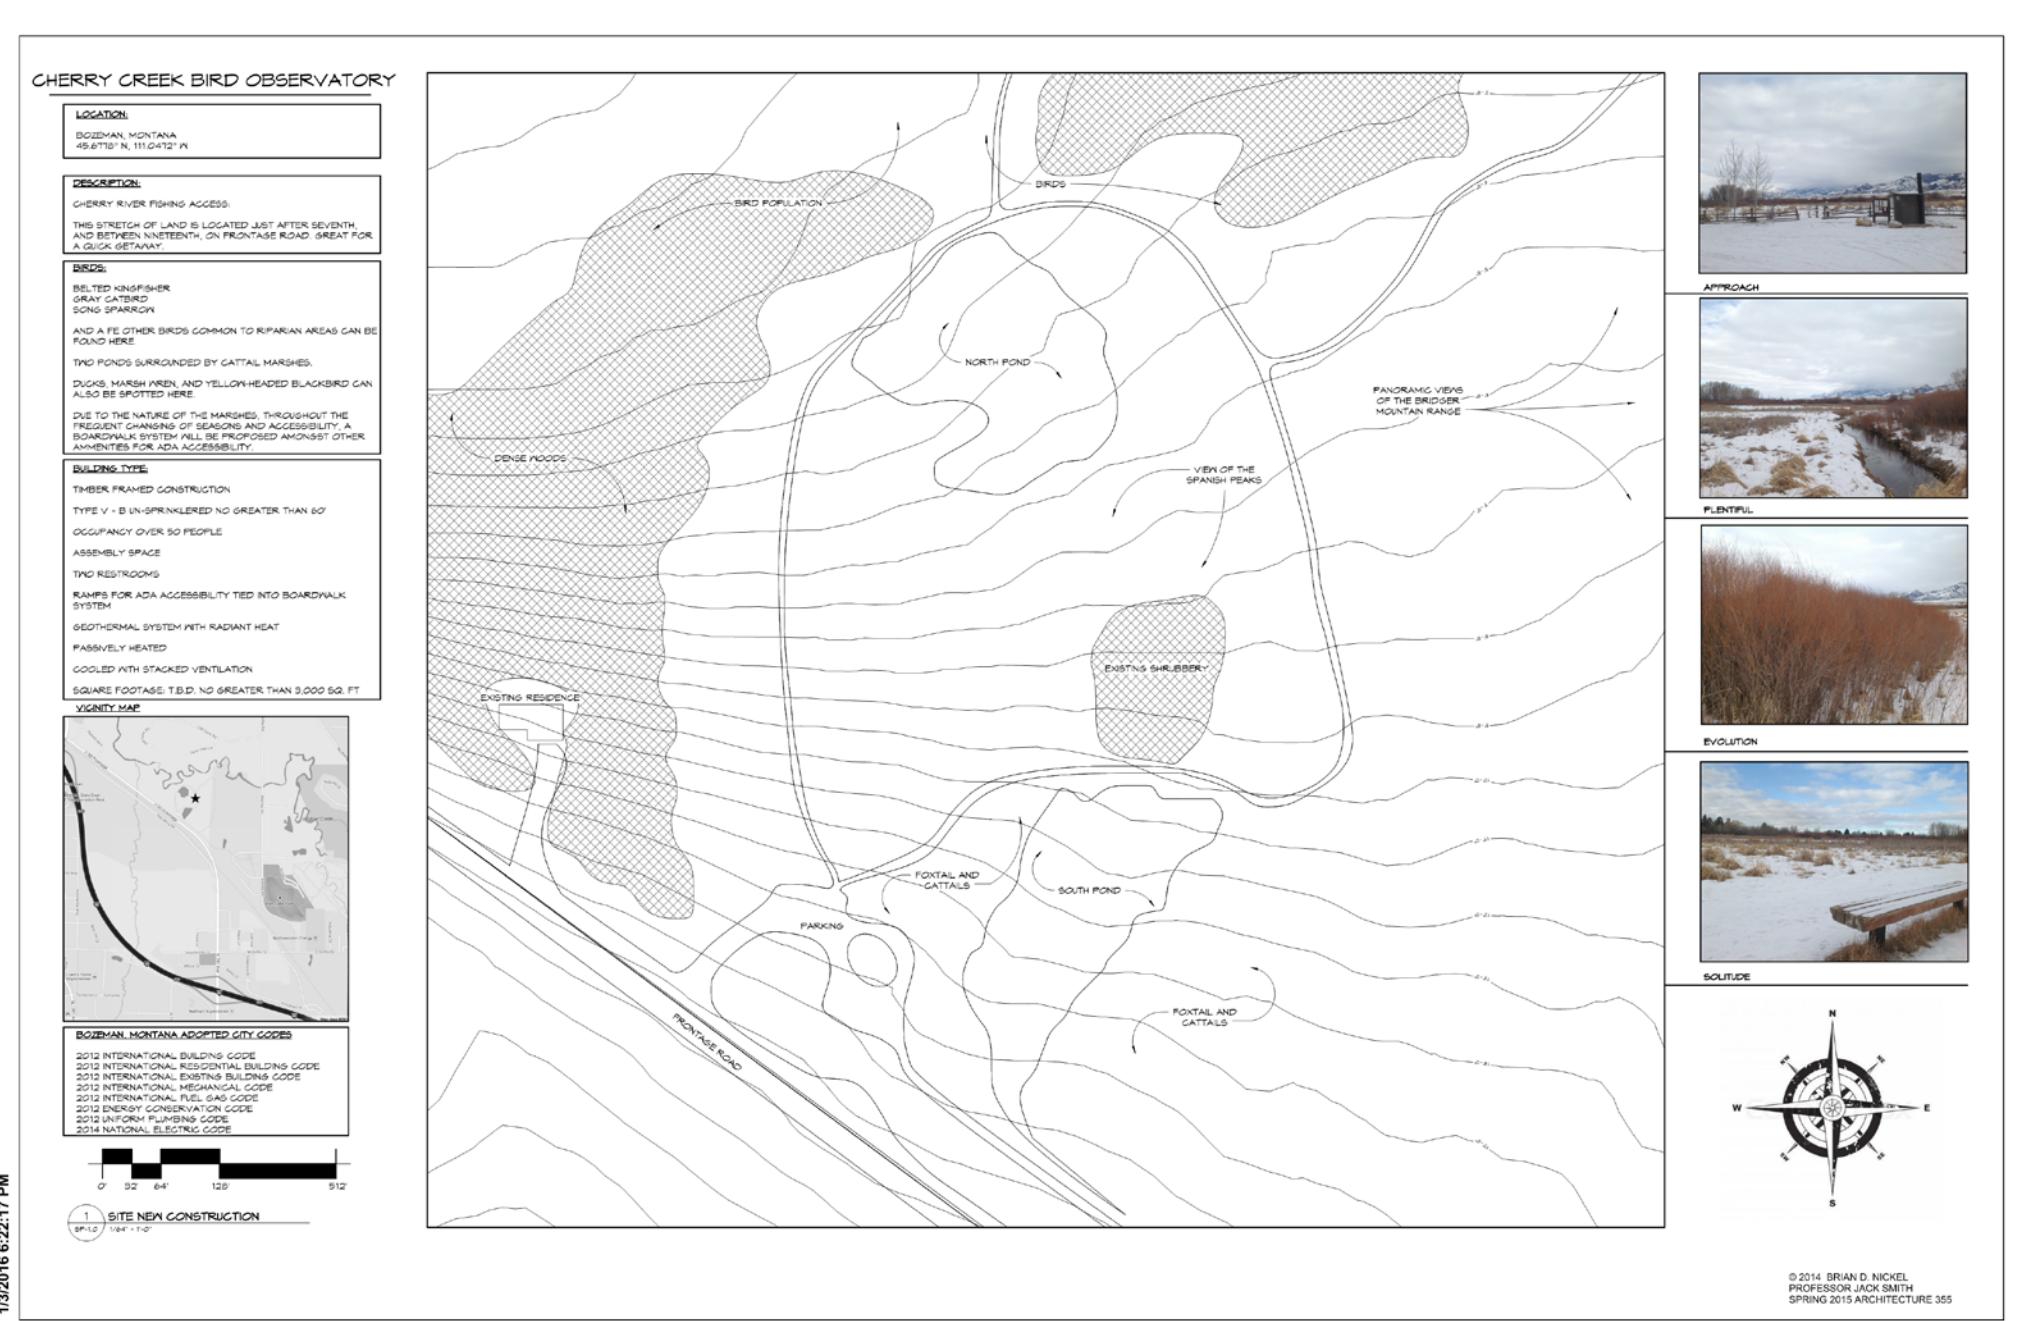

The Bozeman Bird Watching Facility is located in Bozeman, Montana near the Cherry River Fishing Access site. The building plays a crucial role in preserving the habitat for birds and maintaining a peaceful environment for individuals to learn about birds and to bird watch. The main goal and aspiration for this project was influenced by the motion of a bird's wing which leads to a moire pattern. I referenced this moire pattern to a pattern that existed on the site based on site migration. This site influenced the design and placement of the building. The materials intended for construction are wood siding and concrete. The building is intended to be with the nature. In order for it to be in nature I intended it to fully integrate with the site. Allowing the building flow of people to exit and continue through the existing site locations.

BOZEMAN BIRD WATCHING FACILITY

BOZEMAN COMMUNITY CAFE

LOCATION:
507 7th Avenue
BOZEMAN, MONTANA
45°40'55.7" N, 111°24'5.5" W

DESCRIPTION:
THE BOZEMAN CAFE IS SEEKING A NEW KITCHEN AND ROOM TO SERVE THE COMMUNITY. THE SITE IS LOCATED NEAR THE MUCH DESIRED DOWNTOWN CORE OF BOZEMAN, MONTANA.

ADJACENCIES:
TACO JOHN'S
BAR 3
ROYAL 7 MOTEL
HAIR TO PLEASE
VIEWS TO THE SOUTH AND WEST
POTENTIAL FOR VIEWS TO THE BRIDGERS FROM SECOND LEVEL OVERLOOKING THE EXISTING HOTEL

BUILDING TYPE:
STEEL FRAMED CONSTRUCTION
TYPE 1 CONSTRUCTION UN-SPRINKLERED NO GREATER THAN 55
OCCUPANCY OVER 50 PEOPLE
RESTAURANT
TWO RESTROOMS
RAMPS FOR ADA ACCESSIBILITY
GEOTHERMAL SYSTEM WITH RADIANT HEAT
PASSIVELY HEATED
COOLED WITH STACKED VENTILATION
SQUARE FOOTAGE: I.B.D. NO GREATER THAN 8,000 SQ. FT

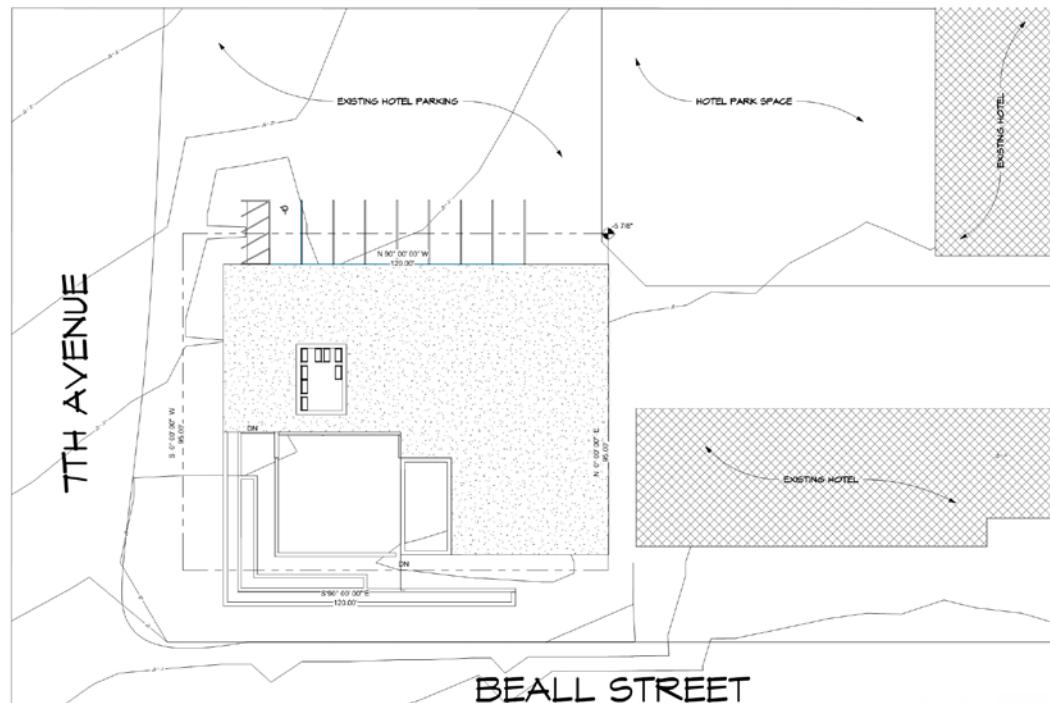

B-3 (Central Business District)

The Community Cafe + Warming Center is located down seventh street in Bozeman, Montana. This project was focused on providing a solution to the existing community cafe that could enhance the building by providing spaces that were more usable by staff and comfortable to the customers of the cafe. I focused on privacy issues and lighting for enhancing these spaces, and by providing an outdoor warming center that could be operable during the hours the cafe was cold. This allowed me to enhance the cafe experience by providing a community space that was operable past hours and for the homeless.

The Evil Knievel Museum is located suspended above and attached to the downtown core of Bozeman, Montana. This project was focused around my client, Evil Knievel, a Butte, Montana native and daredevil stuntman. Our task was to design a building that was parasitic in nature, so I began by focusing on concepts around Evil Knievel's broken bones. I studied precedence amongst Constant Nieuwenhuys, Lebbeus Woods, and Coop Himmelblau. Through these performance based, utilitarian society based ideals, I was able to develop an idea that Evil Knievel wanted to extend a branch of his Butte, Museum to Bozeman, Montana, but also a place where he could perform and suspend himself above the town of Bozeman, Montana. This attaches to a penthouse that is renovated into one of the existing apartment complexes and branches out over to the pub across the street. This performance based structure is intended to reflect broken bones. The broken bone structure is to be a way of suspending oneself above main street allowing the occupant to view space in a daredevil way.

PARASITIC ARCHITECTURE: EVIL Knievel MUSEUM

B-3 (Central Business District)

Ambulance service; apartments; arts and entertainment centers; automobile parking lot or garage; banks and other financial institutions; business, technical or vocational schools; community centers; convenience use restaurant; daycare centers; health and exercise establishments; hotel or motel; laboratories; medical and dental clinics; meeting hall; offices; parking facilities; personal and convenience uses; pet grooming; private club, fraternity, sorority or lodge; public buildings; restaurants; retail uses (excluding adult businesses); upholstery shops; wholesale establishments (with samples, no stock on premises)

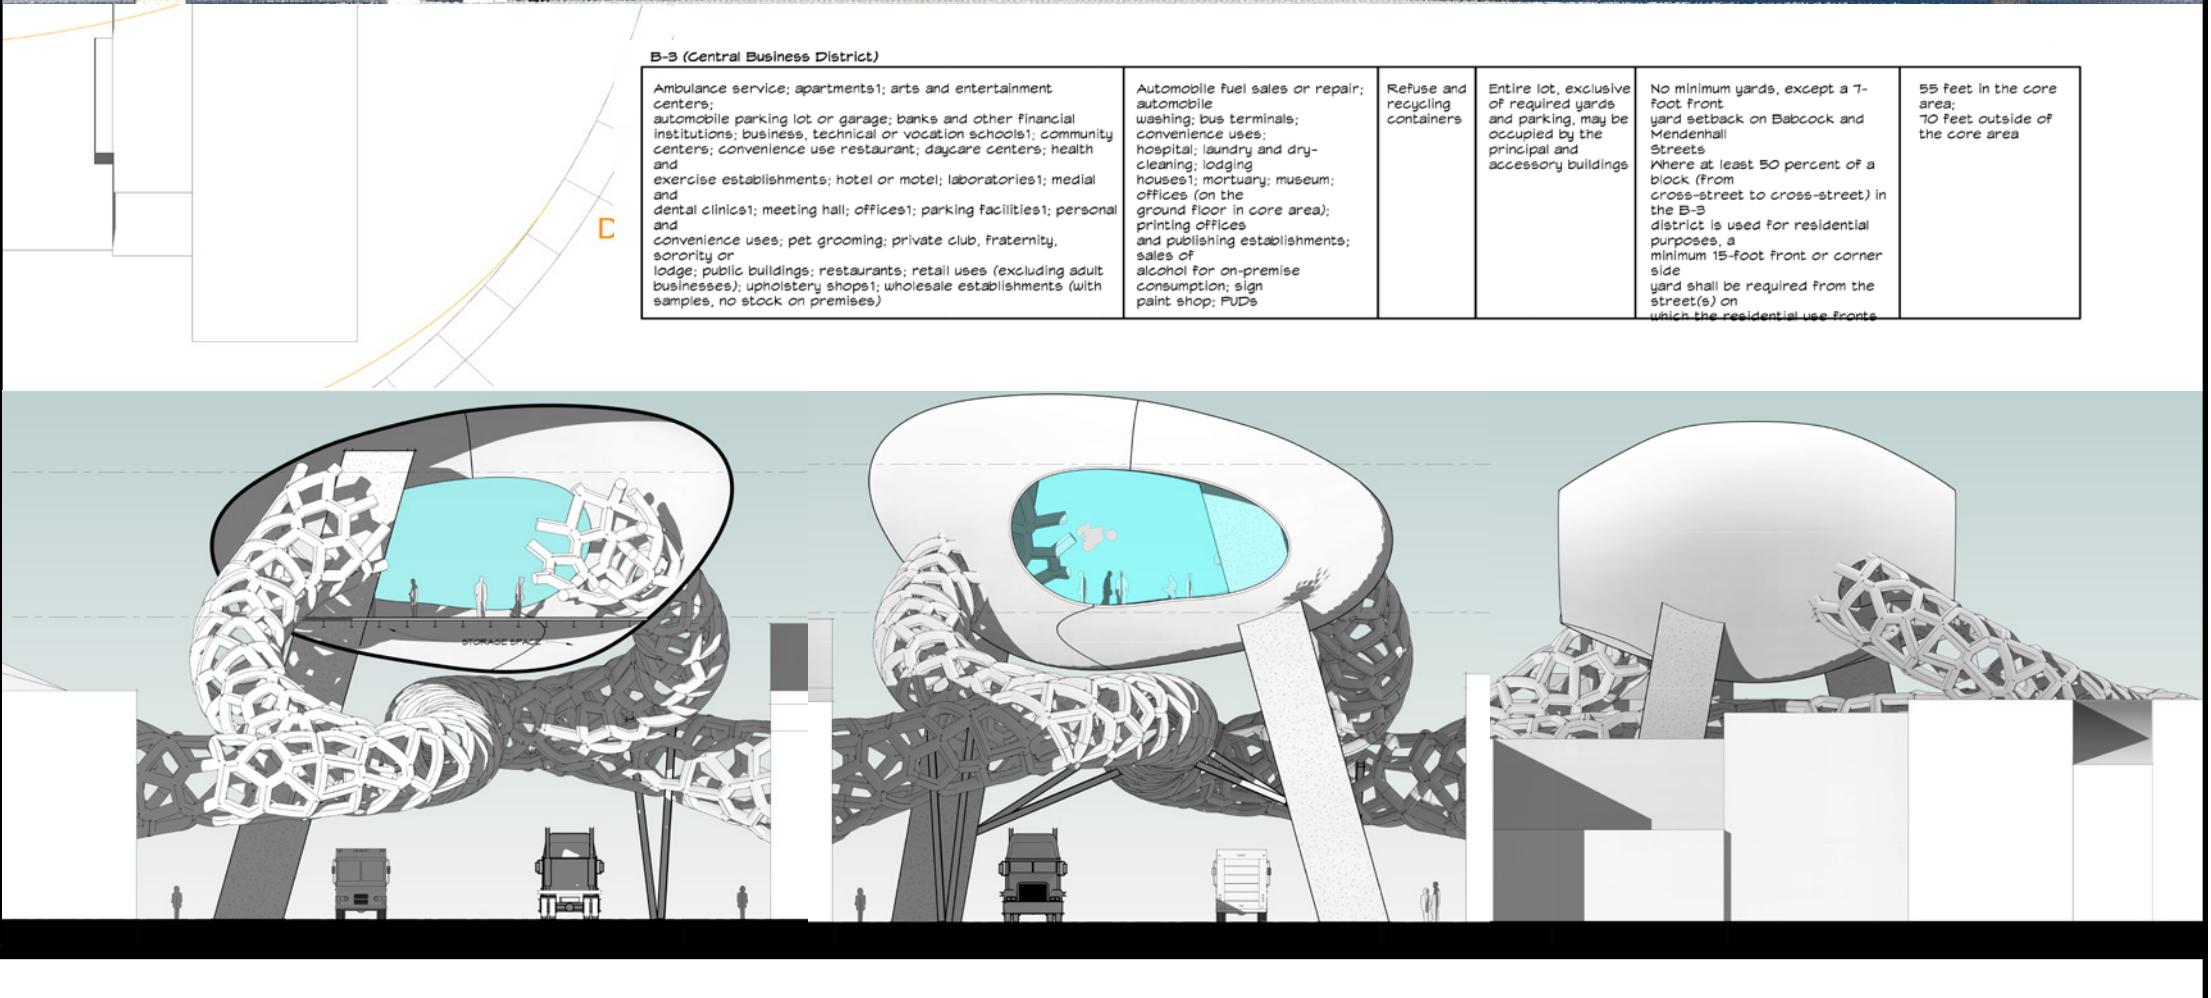

Automobile fuel sales or repair; automobile washing; bus terminals; convenience uses; hospital; laundry and dry-cleaning; lodging houses; mortuary; museum; offices (on the ground floor in core area); printing offices and publishing establishments; sales of alcohol for on-premise consumption; sign paint shop; FUDs

Refuse and recycling containers

Entire lot, exclusive of required yards and parking, may be occupied by the principal and accessory buildings

No minimum yards, except a 7-foot front yard setback on Babcock and Mendenhall Streets
Where at least 50 percent of a block (from cross-street to cross-street) in the B-3 district is used for residential purposes, a minimum 15-foot front or corner side yard shall be required from the street(s) on which the residential use fronts

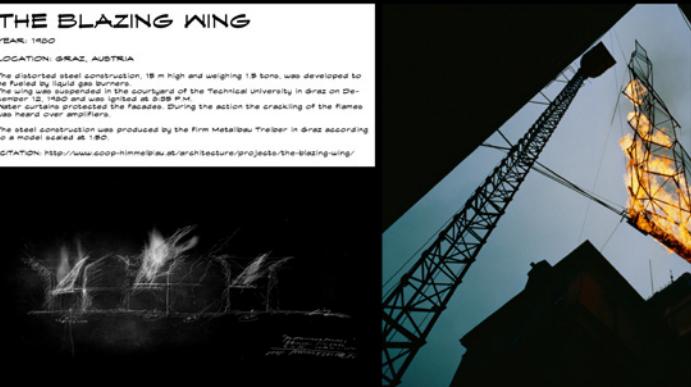

55 feet in the core area;
10 feet outside of the core area

COOP HIMMELBLAU

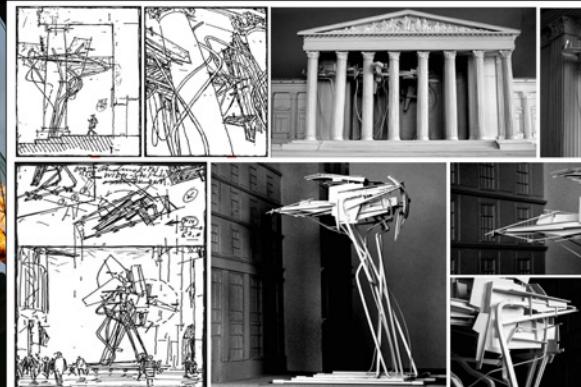

THE BLAZING WING

YEAR: 1990
LOCATION: GRAZ, AUSTRIA
The distorted steel construction, 18 m high and weighing 1.5 tons, was developed to be fueled by liquid gas burners.
The action was performed in courtyard of the Technical University in Graz on October 12, 1990 and was ignited at 9:30 P.M.
The steel construction was produced by the firm Metallbau Tröber in Graz according to a model scaled at 1:60.
CITATION: <http://www.coop-himmelblau-architecture/projects/the-blazing-wing/>

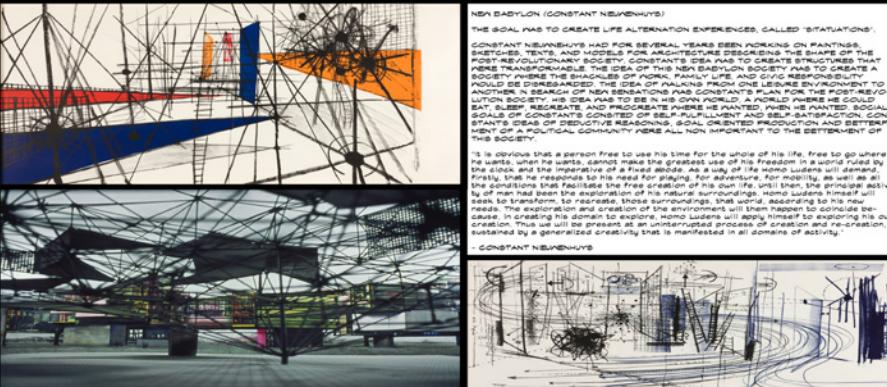

LEBBEUS WOODS

YEAR: 1990
LOCATION: NEW YORK CITY, USA
The structure, 100 ft high and 100 ft wide, was built in the courtyard of the Technical University in Graz on October 12, 1990 and was ignited at 9:30 P.M.
The steel construction was produced by the firm Metallbau Tröber in Graz according to a model scaled at 1:60.

CONSTANT NIEUWENHUYSEN

YEAR: 1990
LOCATION: NEW YORK CITY, USA
The goal was to create life-alternation experiences, called "situations".
CONSTANT HODIN HAD FOR SEVERAL YEARS BEEN WORKING ON PAINTINGS ON POSTER-SIZE PAPER AND HOTELS AND AIRPORTS. HE WANTED TO CREATE A POST-INDUSTRIAL SOCIETY. HIS IDEA WAS TO CREATE STRUCTURES THAT WERE TRANSFORMABLE. THE IDEA OF THIS NIA BABELYON SOCIETY WAS TO CREATE A COMMUNITY THAT COULD COEXIST WITH THE EXISTING SOCIETY. IT COULD BE DISMISSED AS A COOL IDEA, BUT IT WAS A COOL IDEA. THE IDEA WAS TO CREATE A POST-INDUSTRIAL SOCIETY. HIS IDEA WAS TO BE IN HIS OWN WORLD, A WORLD WHERE HE COULD DAY DREAM. HE COULD DAY DREAM. HE COULD DAY DREAM. THE GOALS OF CONSTANT'S CONSISTED OF SELF-FULFILLMENT AND SELF-SATISFACTION. CONSTANT'S IDEAS OF DEDUCTIVE REASONS, LOGIC-ORIENTED PRODUCTION AND DETERMINED, CRITICAL CONVERSATION, WERE ALL NON-IMPORTANT TO THE DETERMINATION OF THIS SOCIETY.

Voronoi Diagram

Mathematica

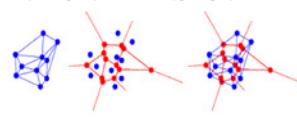

The partitioning of a plane with a points into convex polygons such that each polygon contains exactly one generating point and every point in a given polygon is closer to its generating point than to any other. A Voronoi diagram is sometimes also known as a Dirichlet tessellation. The cells are called Dirichlet regions, Thiessen polygons, or Voronoi polygons.

Voronoi diagrams were considered as early as 1544 by René Descartes and were used by Dirichlet (1850) in the investigation of positive quadratic forms. They were also studied by Voronoi (1907), who extended the investigation of Voronoi diagrams to higher dimensions. They find widespread applications in areas such as computer graphics, epidemiology, statistics, and operations research. One notable use of a Voronoi diagram was the analysis of the 1854 cholera epidemic in London, in which physician John Snow determined a strong correlation of deaths with proximity to a particular (and infected) water pump on Broad Street.

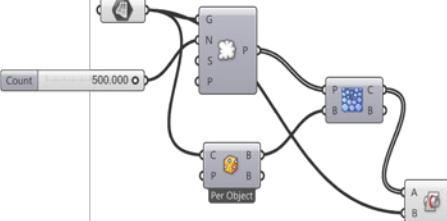

The `Wolfram Language` command `VoronoiDiagram` in the `Wolfram Language` package `ComputationalGeometry`` returns a data structure corresponding to the Voronoi diagram of a given set of points, and `DiagramPlot` gives a graphical illustration of the Voronoi diagram (left figure above). Voronoi diagrams can be even more easily visualized in the `Wolfram Language` using graphics functions such as `ListDensityPlot` and `ListLinePlot` with the option setting `InterpolationOrder -> 0` (right two figures).

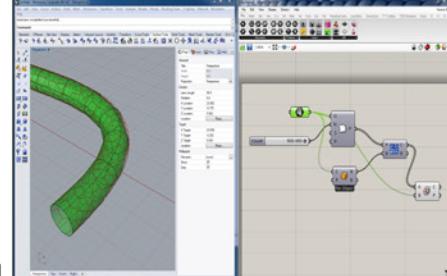

The Delaunay triangulation and Voronoi diagram in \mathbb{R}^2 are dual to each other in the graph-theoretical sense.

In Season 4 episode "Black Swan" of the television crime drama `NUMB3RS`, math genius Charles Eppes proposes performing a time series analysis of overlapping Dirichlet tessellations in an attempt to track the movements of a suspect.

1 SECOND LEVEL NEW CONSTRUCTION
A-21 1/4" x 1-1/2"

MSU SOA Third Year Studio Pt 2 • Spring 2015 • Jack Smith 23.

DAWSON COMMUNITY COLLEGE DINING HALL RENOVATION

THE BOZEMAN DATA CORE

LOCATION:
2-48 W Mendenhall St
Bozeman, MT 59715
45.680158, -111.038009

DESCRIPTION:
THE BOZEMAN ARMORY SITE
THE SITE IS IN RUGGED CONDITION. THE PARKING LOT TO THE WEST IS HEAVILY USED AND THE BUSINESSES TO THE EAST ARE IN NEED OF RENOVATIONS.

SITE CHARACTERISTICS:
THE ARMORY IS MADE OF STACKED CONCRETE FORMS THAT MAKE THE BUILDING INCREDIBLY DURABLE. THE BUILDING HAS BEEN INFILTRATED WITH BIRDS, HOMELESS, AND EXTREME WEATHER CONDITIONS.

THE SITE IS CURRENTLY UNDER UTILIZED TWO PONDS SURROUNDED BY CATTAIL MARSHES.

DUCKS, MARSH KREN, AND YELLOW-HEADED BLACKBIRD CAN ALSO BE SPOTTED HERE.

DUKE TO THE NATURE OF THE MARSHES, THROUGHOUT THE FREQUENT CHANGING OF SEASONS AND ACCESSIBILITY, A BOARDWALK SYSTEM WILL BE PROPOSED AMONGST OTHER AMENITIES FOR ADA ACCESSIBILITY.

BUILDING TYPE:
BUSINESS GROUP B OCCUPANCY

TYPE II-A-Protected Combustible (Also known as "ordinary" construction with brick or block walls and a wooden roof or floor assembly which is 1 hour fire protected).
2 Hr. Exterior Walls*
1 Hr. Structural Frame
1 Hr. Floor/Ceiling/Roof Protection

Animal Shelter
Data Center
Ski Hill
Party Headquarters
Public Art
Multi-Family Housing

GEOTHERMAL SYSTEM WITH RADIANT HEAT
PASSIVELY HEATED
COOLED WITH STACK VENTILATION.
DATA CENTER WILL BE COOLED WITH COOLING TOWERS THAT HOUSE ELEVATOR SHAFTS.
WESTERN FINS THAT CREATE A THERMAL BLANKET, OPERABLE FINS THAT CAN BE ADJUSTED INTERNALLY THROUGH CONTROLS.

SQUARE FOOTAGE: 226,613 SQ. FT.

The Bozeman Hybrid building is located in downtown Bozeman, Montana. This building is fundamentally evolved from ideals laid out by manifestos written by Constant Nieuwenhuys's "New Babylon" and Michel Foucault's "Of Other Spaces". The ideas of a utopian society that exists in the space between this allows for the occupants of society to take advantage of all space that remains. Taking a program structure that is thought to be broken and piecing it together in a way that works symbiotically. The challenges of this project evolved around the program and "big" nature of the building. This building consists of an animal shelter, multi family housing, a central data core, an art museum, party headquarters (bar and restaurant), and a ski hill/hiking hill.

The Bozeman Hybrid

OPERATION HYBRID: ARCHITECTURE 456

CHRISTOPHER LIVINGSTON

Bozeman, Montana 59715 brian d. nickel

Client: Christopher Livingston

Size: 256,573 SQ. FT.
