Underground
Station

Program Used

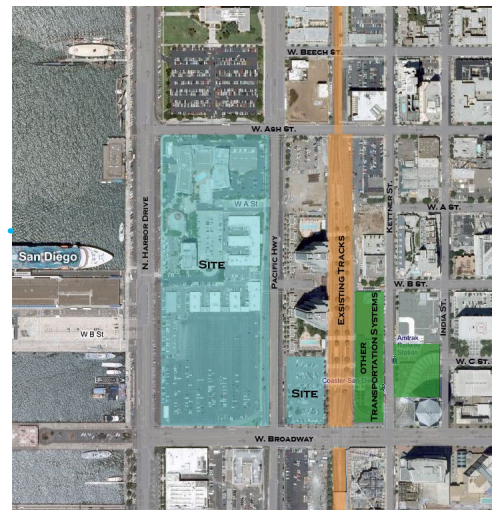

The project introduces a new local train station for the proposed west coast high-speed rail line between San Francisco and San Diego. The assumed building site is predominantly vacant at the moment, with only a Holiday Inn building occupying a small portion of it. The location offers stunning views of San Diego's waterfront and downtown.

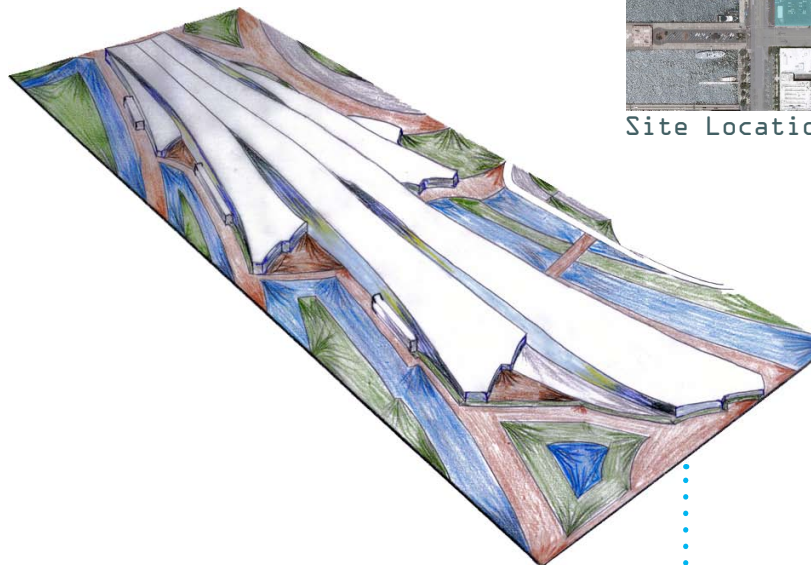

The building shape is simulating a breaking wave, as it is crawling on to shore. The design focused on creating a pedestrian friendly environment and attempts to bridge a divide between San Diego's downtown and the waterfront. Park like landscaping, in combination with water features and copious amounts of outdoors seating create a new recreational area for San Diego and its visitors to engage in many outdoors activities.
