PROJECT SITE - CONCEPT

The site is located between Talatpaşa Boulevard in north and railroad in south including Cebeci İnönü Stadium and its surrounding.

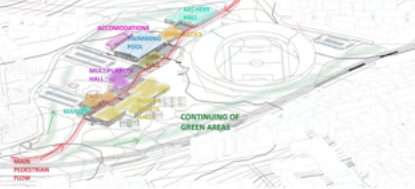

Main focus of the project is the design of a sport center by taking into account the strong emphasis on the historical-urban character of the district. This project is a proposal focal point for the urban regeneration of the Cebeci district. As a result of this role, the project is designed as a mixed-use campus, which has a strong pedestrian and vehicular connection with its surroundings.

The project area had some problems such as:

- Ruining Cebeci İnönü Stadium and increasing disadvantages of security
- Traffic intensity problem and car park problems in area
- Railway cuts the area regions and block connection between them
- Absence of public spaces and green areas
- Ruining heritage consciousness in area

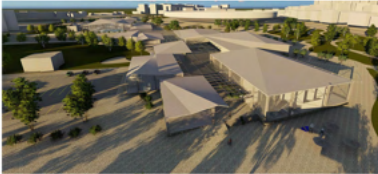

By creating public spaces attached to a pedestrian spine, renovating the heritage buildings by giving new values them, continuing the green areas, this project invites people. Ruining stadium has a new important role in the project and attracts people with new organizations.

PEDESTRIAN PROMENADE AND ATTACHED SPACES CONCEPT

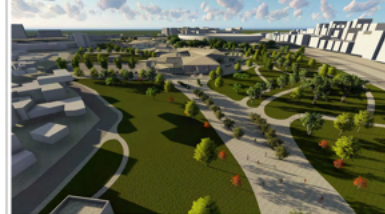

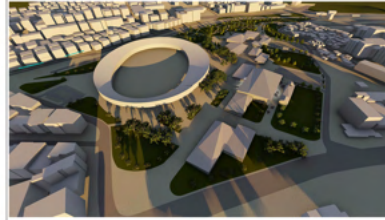

Potentials around area:

- İnönü Stadium
- Hamamönü
- Kurtuluş Park
- Talatpaşa Avenue
- Rail way
- Old bazaars and hans
- University and dormitories
- Hospitals
- Republic heritage buildings

- 4. SINIF 1. D NEM PROJES  - ANKARA- CEBEC  SPOR KOMPLEKS 
  LEV: SPOR KOMPLEKS 

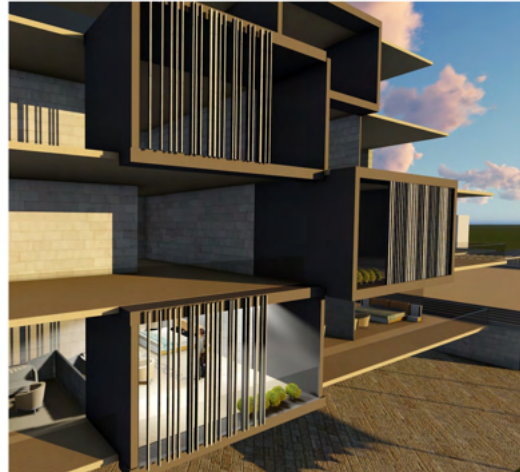

The site is in Ankara which has the biggest part of Turkey.

Each of existing areas in Ankara have important problem like high old-aged buildings in east the close the view of sea and air circulation to the backyards.

City has a typical mediterranean climate which is a type of sub-tropical climate. City has hot and dry summers and warm and wet winters. Most of population is over 40 years old and generally conservative and open spaces for design should be considered because of elderly population.

City is rich about cultural events. There is a date arena and theater which is located in Turkey. Also many cultural centers in the city which create a culture of culture.

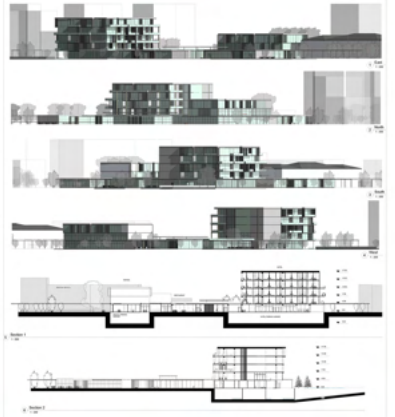

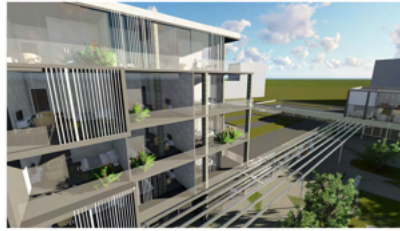

In this design proposal, climate and economic factors, existing important buildings were taken into account. Regulate were used to create open open space in a hot climate. But some elements are used.
