An architectural drawing of a building's structural frame, showing a grid of beams and columns. The drawing is rendered in a sketchy style with visible pencil or charcoal lines. The beams and columns are colored in shades of green and blue, creating a sense of depth and structure. The background is a light, textured surface.

Bedroom wing

Utility wing

Kitchen wing

Pavilion

**Living Pavilion.** H7 is one of five – recently expanded to seven – experimental case study houses originally conceptualized as exercises in design, detailing and visualization. The house is arranged around a central garden and is composed of four wings, the living pavilion, bedroom, dining, and the utility wing.

**Living pavilion**

**Dining wing.** Each structure is enveloped by terra cotta shingles.

**Bedroom wing.** The bedrooms hover the terrain and is anchored on the other end by the library.

Utility wing.

**Living pavilion.** The living pavilion's interiors echo the exterior cladding. The roof hovers over the space with a mural covering the whole surface.

**Living pavilion.** The shingles provide the whole pavilion with a delicate illumination.

**Living pavilion.** An watchtower provides a setting for clandestine conversation with a vantage point. It contrasts with the massive conversation pit beneath it.

Speed table

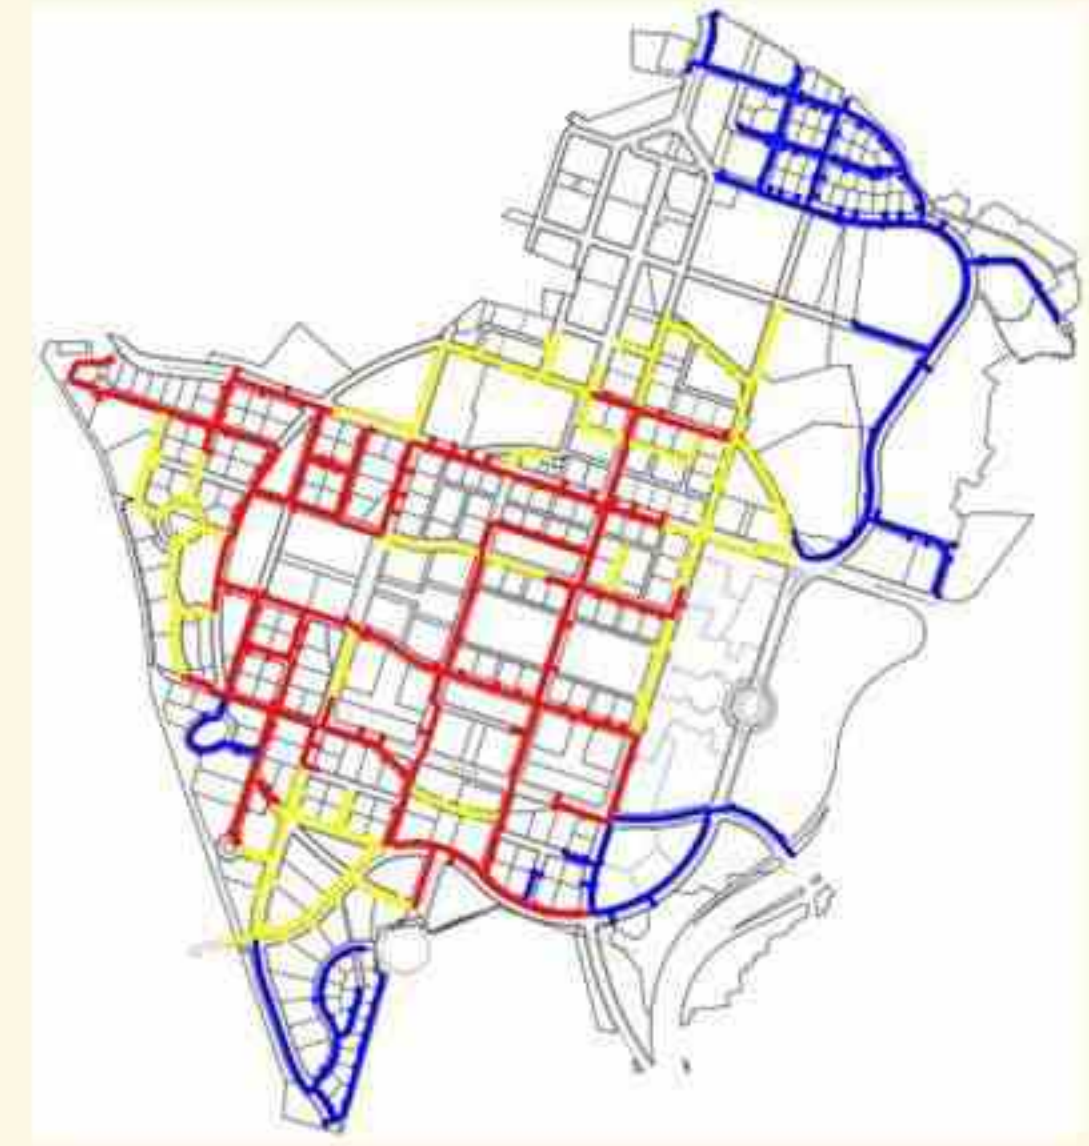

- Design of a pathway system that goes across the whole visual corridor.
- Allows all the pathways to be on the same level prioritizing pedestrian accessibility.

SNR Lots

- Compilation of relevant guidelines for BGCs own Design Standards and Guidelines.
- Tailor fitting and resolving guidelines to be specific to a uniquely re-blocked project.

Project Labyrinth

- Assisted senior project proponent in quantity surveying and drafting.
