Howard University School of Architecture

PROJECT MODELED & RENDERED
USING REVIT & PHOTOSHOP

The building that is home to the school of architecture at Howard University, Howard M. Mackey Building, used to be the law school. Educating the likes of Thurgood Marshall in the 1930s, the building is not suited to educate students in the progressive field of architecture today.

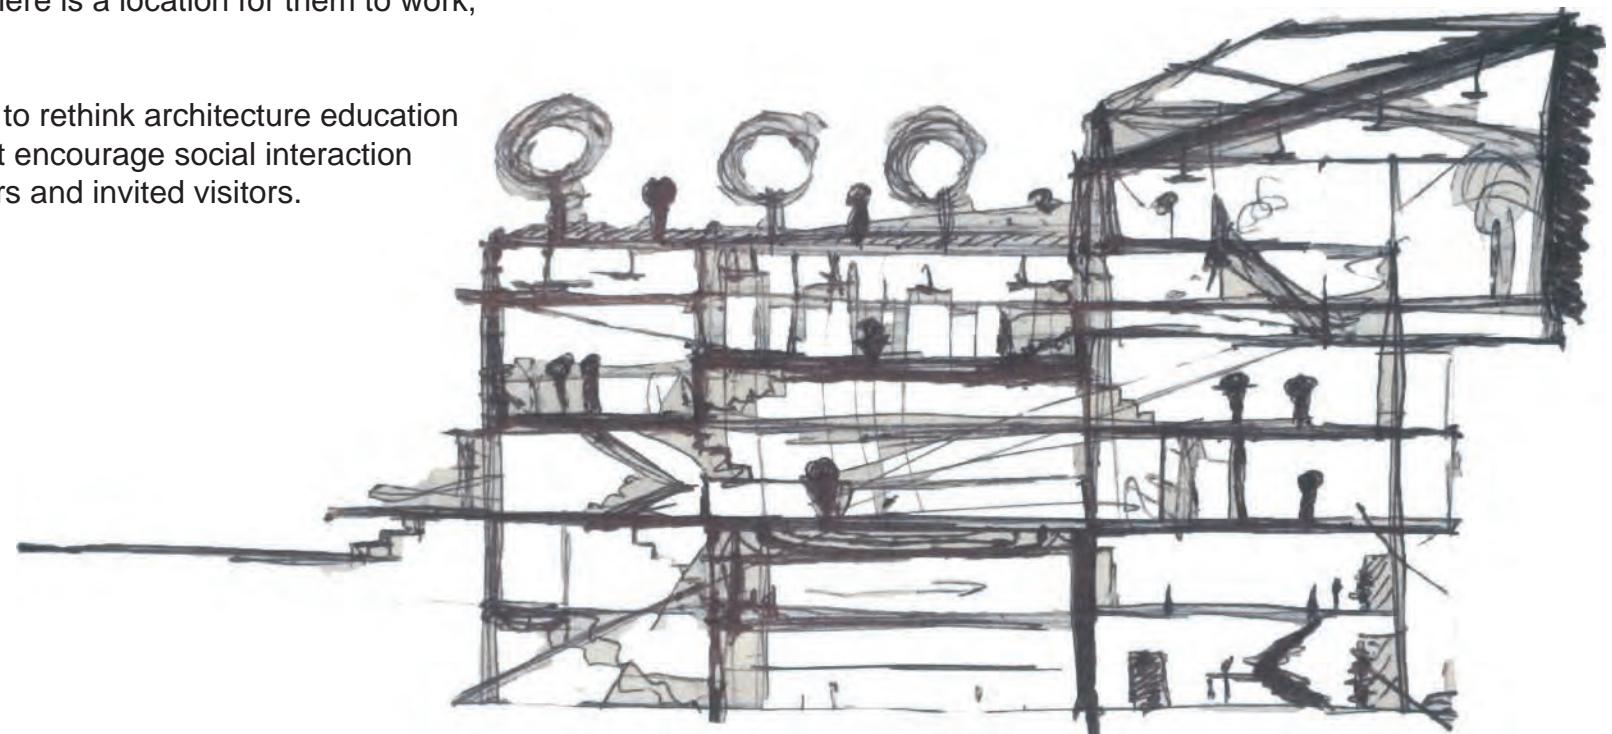

For my thesis project I wanted to re-imagine the education at Howard's school of architecture by designing a new school, but in doing so I did not want to forget the history that has been instilled in the culture of Howard's program today. Finding a balance, I came up with a design that preserves the landscape and parts of the existing brick context on the building while also providing a building that can educate today and tomorrow's Howard architecture students.

The Concept behind my design was to create a building for architectural education that would act as a studio space and as a literal teacher for the students. Wherever a student may journey within the building there is a location for them to work, collaborate, and learn.

Within the concept I wanted to rethink architecture education and try to create spaces that encourage social interaction amongst students, professors and invited visitors.
