About Me

With 5 years of experience in interior design, I have successfully designed retail stores, department stores, and offices with teams. I have effectively coordinated projects with other teams and offices locally and internationally, demonstrating excellent management and prioritization skills. Currently, I am seeking a position in the interior design field. I possess intermediate-level skills in Revit, MS Office, Adobe Creative, and SketchUp, and I am an expert AutoCAD user.

Fraser's Property, a subsidiary of TCC Group, one of Thailand's largest conglomerates, is developing **One Bangkok**, a mixed-use development in Bangkok, Thailand. The project, which is worth US\$3.9 billion, sits on a 16.7-hectare (41-acre) site and features five office towers, three hotels/service apartment towers, interconnected retail podiums, and art and cultural venues.

The development also includes 8 hectares of plazas and landscaped green spaces. To promote sustainability, the project incorporates a centralized energy and water management system and recycled waste building materials in construction.

One Bangkok is the first project in Thailand to aim for a LEED Platinum certification for neighborhood development.

As part of the project, I worked on the design of Retail Zone 3 (R3), a luxury plaza area with a design theme centered around black aluminum Sahara texture edged with Bronze.

Aegean Blue

The project's design incorporates a unique color scheme for each restroom and utilizes curved and smooth elements. This is achieved by creating a continuous mosaic curve along the corner where the wall meets the ceiling, as well as incorporating curved elements in the restroom entrance, toilet cubicle, and vanity area. Additionally, the bronze edging decoration is in line with the overall design of the common area.

The Chip Mong 271 Mega Mall project is a huge undertaking that will result in a shopping mall covering 160,000 sq.m (39.5 acres) and providing 58,000 sq.m. (15 acres) of rental space. The mall will offer a variety of retail stores, restaurants, entertainment facilities, a cinema, and 2,000 parking spaces, along with elevators, safety features, and security systems. The project also includes plans to construct condominiums and commercial buildings surrounding the department store. Once finished, the mall is expected to become a prominent landmark in Cambodia.

The mall's exterior design is centered around shape and pattern, with white being the primary color chosen to maintain the design's integrity. The client's corporate color, pink, will also be incorporated to promote their identity and add a touch of elegance to the appearance.

3rd floor

2nd floor

1st floor

G floor

The department store's design features a combination of white and wood patterns, with each floor showcasing a unique design. The first level is mainly white, while the next has an increased use of wood patterns. The fourth and final floor is fully adorned with wood accents. The floors are labeled as G, 1, 2, and 3.

For the **floor design**, the project opted for stone flooring with a random pattern of three colors - white, light grey, and beige - to represent wooden accents. The colors are arranged in a brick pattern and separated diagonally to prevent repetition and boredom among customers.

As for the **walls**, light grey paint covers most of the area, while grey paint is used for each shopfront's design. The challenge was to ensure that the design enhances visibility for all retail units while considering the anchors' criteria. The project also used white aluminum cladding and wooden pattern laminate for the columns.

Regarding the **ceiling design**, the project used white paint and wooden pattern laminate, with a random pattern for the wooden accents. Groove lines were added to indicate each big area's white color paint to blend well with the wooden patterns. Recessed lighting was also installed throughout the project to create a sophisticated ambiance.

The mall's restrooms have a diverse range of designs, with each one having a unique appearance. Additionally, the female restrooms have a more feminine design, while the male restrooms are more masculine. During construction, we encountered a challenge with the lack of materials, equipment, and hardware supply, which delayed production. However, we were able to overcome this obstacle and finalize the negotiations to complete the project.

The mall project features **The Marketplace** area between the Super Market and Common Area on the 2nd floor (1F). This area offers take-home food, retail space, and event promotions. The design concept focuses on a natural atmosphere, with green and wood patterns. However, the location presents some design limitations that need to be addressed to ensure visibility between areas.

A crucial aspect of the project is **the food court**, with a "FOOD TRUCK" theme. The food court is located on the 4th floor (3F) of the mall, designed with an organic shape and natural vibe. Cute food trucks serve as food stalls, ready to cater to customers.
