Footprint
Architects

They have a pragmatic approach to design and are always mindful of build complexity and cost whilst, at the same time, still being able to create an interesting and desirable product .’

Mr Howard Baron,

—
Sherwood Estates Ltd

The Footprint team

Footprint Architects

About Us

At Footprint Architects we're conscious that our work has a lasting impact on the world. The footprints we leave are sustainable, look beautiful, and a pleasure to live and work in.

By being thorough and thoroughly committed to sustainable building, we're confident these footprints will be appreciated now and by future generations. We love the process of design and engaging with clients and our practice ethos is underpinned by the highest standards of professional services.

We know that our environmentally conscious, creative solutions need to work within project constraints and budget.

We harness our team's specialist experiences and passions and work tirelessly and collaboratively to explore the full possibility of every brief to ensure we maximise the design potential and deliver on brief.

Our simple premise is to:

Ensure every project is considered with the same level of creativity and

detail. Provide the highest level of professional service: to be attentive, responsive and deliver quality documentation on time. To ensure the impact of 'our footprint' is engaging, brings delight, and has longevity.

Footprint Architects architectural expertise have been recognised by winning a number of industry awards including the RIBA South West & Wessex Sustainability Award, Salisbury Civic Trust, Dorset Excellence Awards and the New Forest National Park Building Design Award.

Our Ethos

Environment & Climate

We are committed to saving our planet, responding to the climate emergency by developing buildings that are environmentally sensitive. We design healthy buildings, using natural, low carbon materials to achieve the highest levels of sustainability and comfort. This approach creates warm, low-energy buildings that are a joy to use.

Context & Place

We can turn even the most challenging sites into amazing opportunities. By carefully analysing the site and understanding the local context, we create buildings that make the most of their location, while respecting and celebrating their surroundings. This context-driven approach can help in gaining planning permission on potentially contentious sites.

People & Communities

We create spaces to learn, live, work and to be together that sit in the heart of local communities. From boosting well being to attracting customers, our clients' ambitions are different, but we always think about how the space will be used in the present and made fit for the future.

Our work
