GALLERY DISTRICT

Los Angeles California

PROJECT SUMMARY

Gallery District is a mixed-use housing concept in Boyle Heights, Los Angeles. The project examines how new development can engage the existing community rather than displace it, linking historic context with contemporary needs.

The surrounding area includes street art, music, and public performances that reflect vibrant culture. To support this activity, the building program includes spaces for artists to work, display, and perform across public, semi-public, and private spaces. This approach integrates housing with creative infrastructure and maintains cultural continuity on the site.

PILLARD LIVING

Lubbock Texas

PROJECT SUMMARY

This project examines how a defined structural frame can coexist with natural growth. Concrete and steel form the primary structure, while planted zones remain open so vegetation can establish over time.

Buildings are strategically arranged to provide wind protection and secure outdoor areas. The “solid-void” strategy is applied by removing selected units to create transparency from exterior to interior, evident in elevations and sections.

The structural system and material choices support future adaptability. If ownership or program changes occur, non-structural walls can be removed, enabling renovations without major intervention.

RECLAIMED MARKET

Sevilla Spain

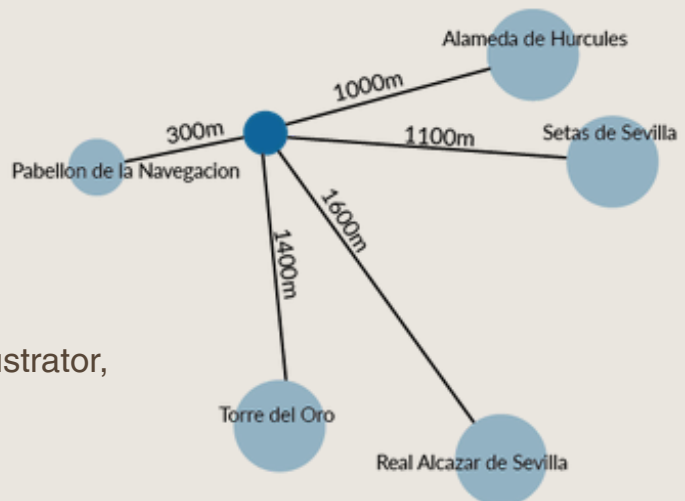

PROJECT SUMMARY

This project focuses on creating a shared community market. By shaping the site, the design anchors the project to the site and takes advantage of the riverside views along the Canal de Alfonso.

Sevilla is known for harvesting produce grown within the city. Hanging gardens are introduced to activate the ceiling plane and as a nod to urban agriculture. Extending these plantings beyond the market forms covered outdoor areas and parks, allowing visitors to engage with the landscape and riverfront.
