

photochromatic chamber

PROJECT DESCRIPTION

Exploration and analysis of natural light behavior with regards to its properties & principles. Function and use are both instrumental (sight/insight) & iconic (phenomenal/imaginative).

Design Concept: The phenomena of backlighting is expressed by the layering of several frames that gradually increase in size. By using wood, the 'softness' of natural lighting is enhanced by the 'warm' quality of the wood.

MEDIA

Analog_ Graphite / Basswood / Laser Cutter
