

“Best in Class Modern” 2011 Free Green “Who’s Next?” Sustainable Housing Design Competition

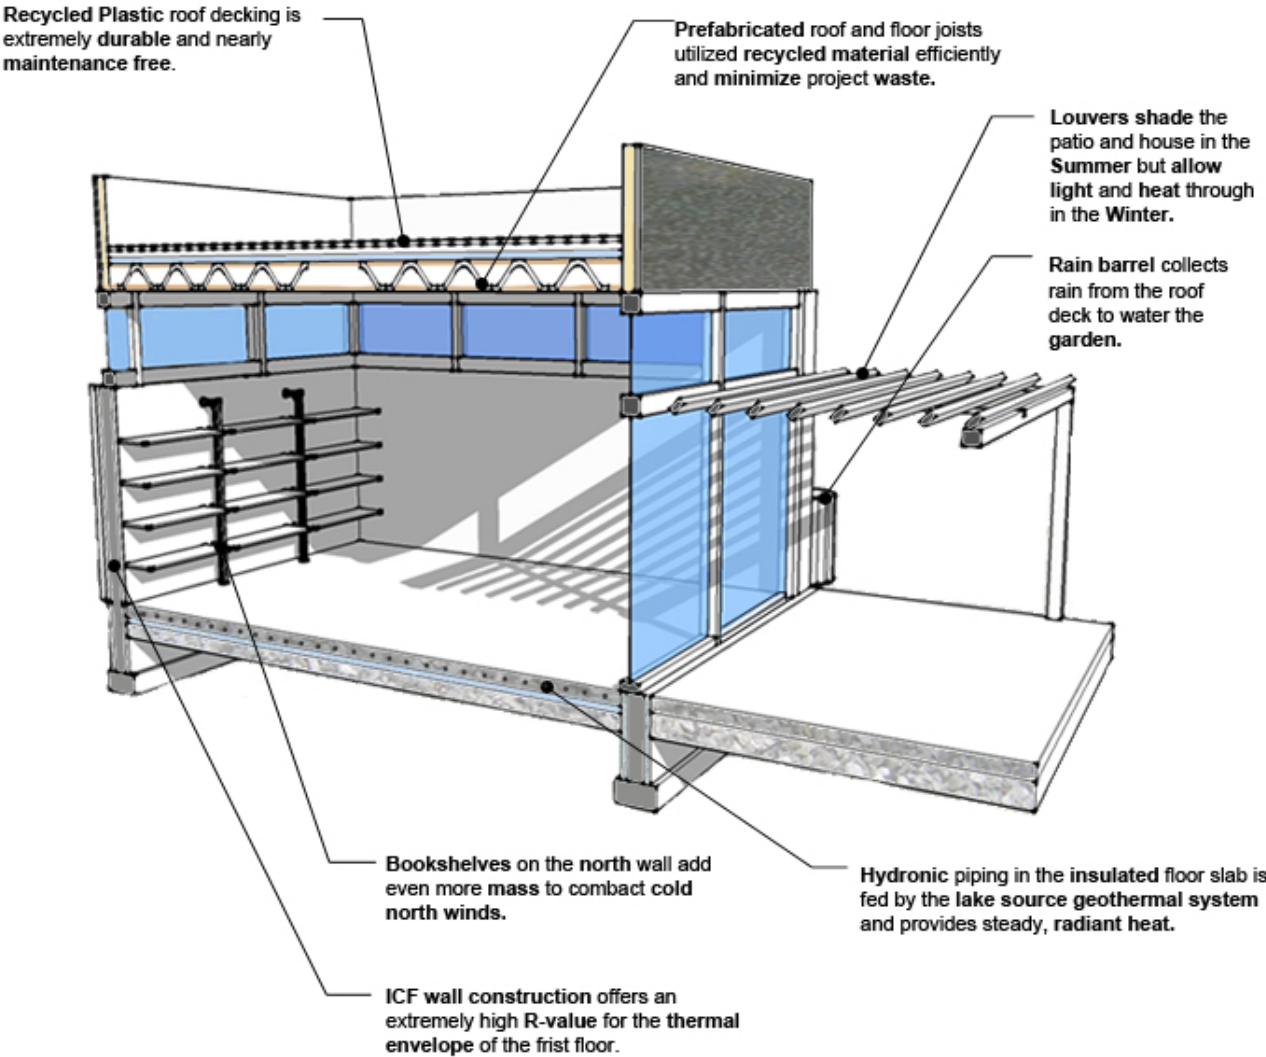

Retreat | Respond

Concept:

An affordable, sustainable home designed for an Artist/Academic couple, which balances privacy and collaboration in an open, flexible plan with a visual relationship with the environment wherever possible. The stacked stone wall defines the major axis of the space, and differentiates between public and private areas of the building. The form and placement of this material is representative of the couple’s long-term effort to save for his home, and demonstrates their belief that incremental efforts can build substantial, meaningful, and beautiful results.

For more information on this project go to: <http://www.freegreen.com/WhosNext/view/plan-general>.

Efficiency:

Construction methodologies and careful siting give the home plenty of natural light and the ability to passively ventilate and heat the home.

Both floor plans have intentional adjacencies and flexible spaces to accommodate private and collaborative actives.
